It is often helpful to develop reports for desktop first to see how all of the child grids interact and to gather field names.

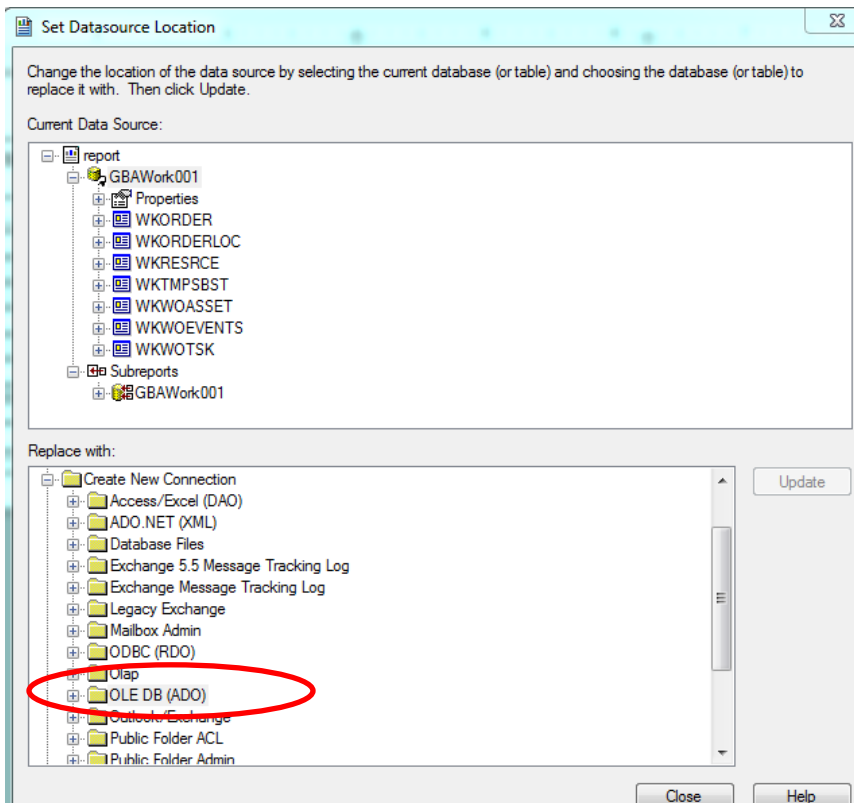

Custom Reports that have been created for the desktop version of Lucy will **NOT** work in the Web application as is. Desktop reports must be converted for Web use.

## Converting Desktop Reports for use in Lucy Web

1. Make a copy of the report and add Web to the end of the report name. (Optional, yet helpful)

Example: Desktop report **WOSumAssetByCat.rpt** would be copied and renamed for the Web **WOSumAssetByCatWeb.rpt**.

2. The Web report would then be converted as follows.
3. Open the report in Crystal Reports.
4. Go to *Database>>Set Datasource Location*.
5. Within the lower box (*Replace with:* ) open *Create New Connection*.
6. Select *OLE DB (ADO)*

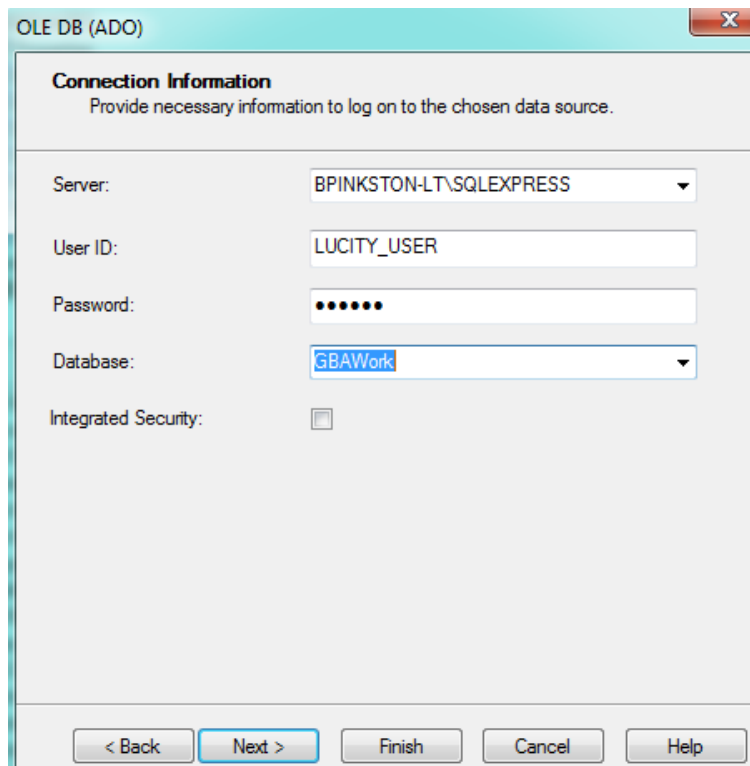

7. You will then be prompted to select a provider. If you are using SQL Server use the *Microsoft OLE DB Provider for SQL Server*. For Oracle use *Microsoft OLE DB Provider for Oracle*.

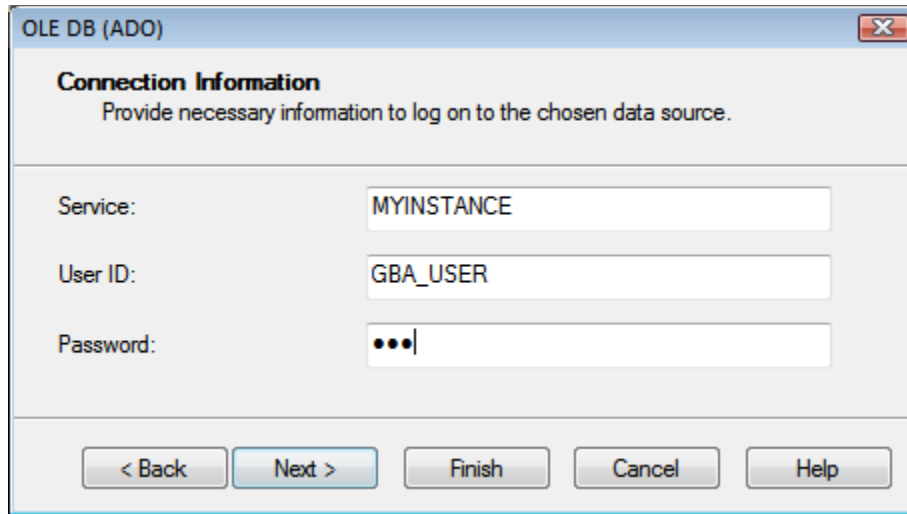

8. Next, enter the Connection information.
- For SQL Server, include the SQL Server Name, User ID, Password, and Database. Your Lucity Administrator should be able to provide this information. The Database is specific to the report database that it was created with such as GBAWork or GBAEquip.

*Note: For 2015r2 post data unification it will be one database. The name will be whatever you have assigned the database (Default is Lucity).*

- For Oracle, include the Service, User ID, and Password.

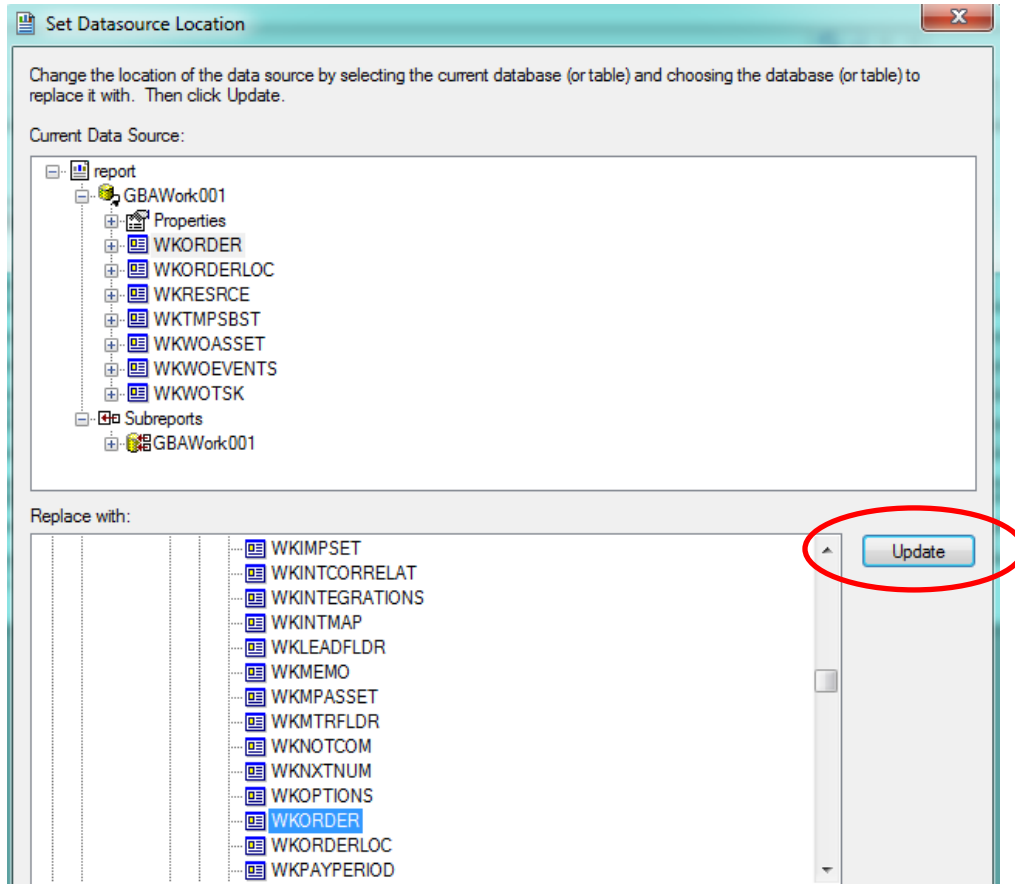

9. Once you create a connection you will need to individually (manually) map **EVERY TABLE** from the report one at a time.

10. To do this, click on a table in the top box (*Current Data Source*) and the same table in the bottom box (*Replace with*) and then click on *Update*. Do this for each table, even the ones listed under Subreports.

*Note: Properties is not a table to be updated.*

11. After the report is converted for Web use it will need to be added to the appropriate report folder.

## Standard Report to a Custom Report

To develop a Custom Report it is often helpful to use a standard Lucity report to start from as opposed to starting from scratch. If your agency uses the Web version of Lucity exclusively then using a standard report pointed correctly for Web use is likely preferred. Depending on the Lucity version being used, there may be options for getting a copy of a Web report.

- The report .rpt file can be copied directly in the report folder and given a new name.
- Lucity offers a Download feature where a copy of the report can be placed on your system.
- There is also a way to Export the report holding the connections to your data similar to the Desktop Export feature.

## Downloading

Downloading a report grabs a copy of the report that can be used to create a custom report from. This report has the correct OLE connections for Web use but it cannot be run outside of the Lucy environment without manually repointing the tables to your data.

1. In the Report Dialog click on the report to be copied.
2. Once the report is highlighted, click on the **Download** button.

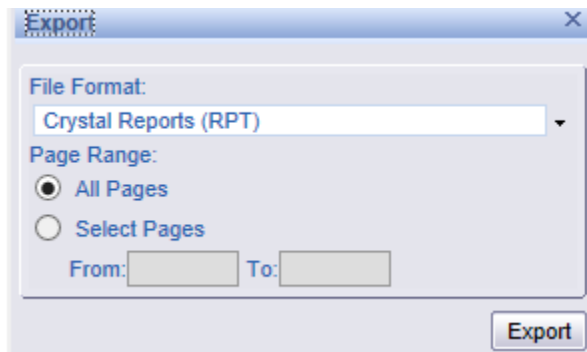

3. Under the **Save** options select **Save as** then browse to the location and give the file a new name.

## Exporting a Web Report

Exporting a report captures the connections to your data. This allows the report developer to work on the report and run it outside of the Lucy environment.

1. In the Report Dialog click on the report to be Exported.
2. Run the report with **Selected Records** and the **Advanced View (HTML)** options.
3. Once the report has run, select the **Export this report** option in the top tool bar.
4. This opens the following Dialog. Click **Export**.

5. The referenced report name in this example is lucidityMSCRV.rpt and is not the actual file name, ignore this. Under the **Save** options select **Save as** then browse to the location and give the file a new name.

6. Select the **Open** option.

7. In the tool bar select **File**, **UNCHECK** the **Save Data with Report** option.

- Open the *Select Expert* and remove the formula for the ID field that was placed in here because the report was run with **Selected Records**.
- Save*. You now have a copy of the report with a new name and pointed to your data. The User ID and Password for your database are required to run the report away from the Lucy environment.

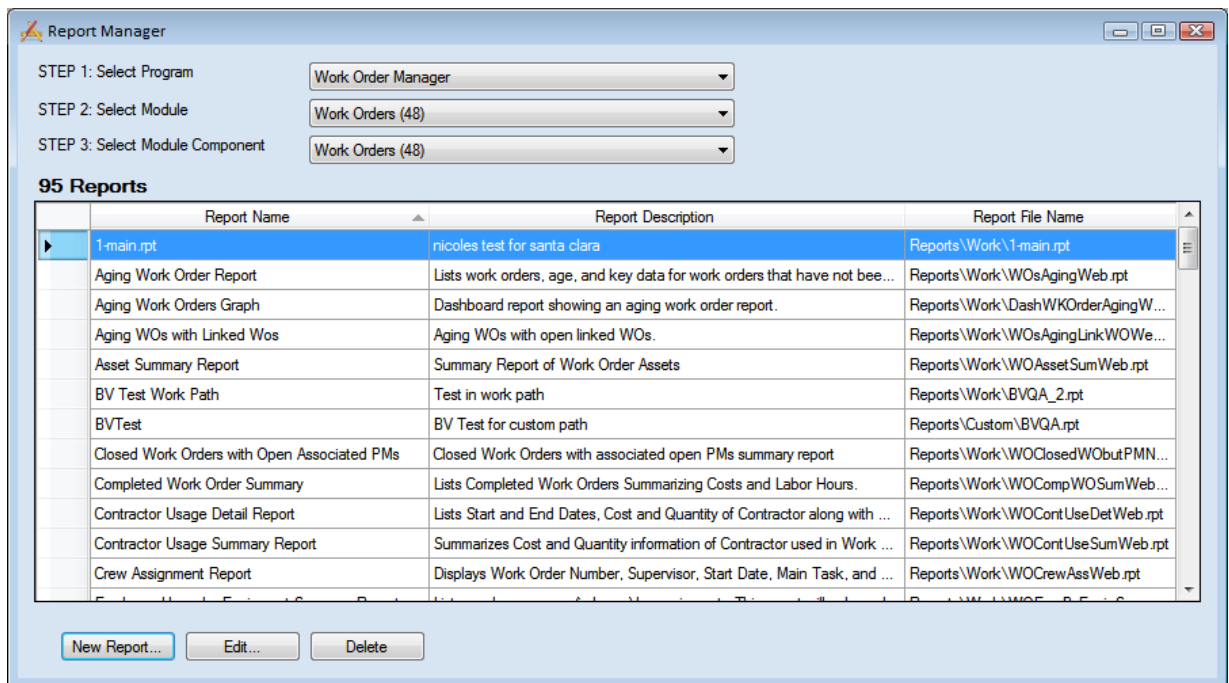

## Adding Custom Web Reports (Prior to V2015)

The converted report then needs to be added to a report folder, typically found at `intpub\wwwroot\LucyWeb\Reports`. Drop the report in the correct folder such as **Work** or **Equip**. Depending on your system and number of custom reports, you may have a separate **Custom Reports** folder and within this there may be folders for the type of reports such as **Work** or **Sewer**.

Then the report will need to be added to the list of available reports in the module the report is to be run from. There are two different methods for adding reports in the web.

### Method 1 - Through the Lucy Administration Tool

- Launch the Lucy Administration Tool and go to **Reports > Report Manager**.

- Use the drop downs at the top of the tool to navigate to the module that the report is meant for.
- Click the **New Report** button at the bottom of the Report Manager dialog.

- The following window will appear:

**New Report**

Report Name  
Example

Report File Path (partial path beginning with Reports\  
Reports\CustomWebReports\Work\ExampleReportWeb.rpt

Report Description  
This is an example of a report being added.]

Report Group (optional): [ ]

Save Cancel

- Enter the **Report Name**.
- Enter the **Report File Path**. This should always start with **Reports\** and then the rest of the path to the report including the **.rpt** file extension.
- Enter the **Report Description**.
- Click **Save**. The new report will be added to the Report Manager.

## Method 2 - Through Lucity Web

- Open the Web module that the report will be run from.
- Open the Reports Tool.
- To launch the Reports tool, click the  on the toolbar. The following window will appear:

Reports

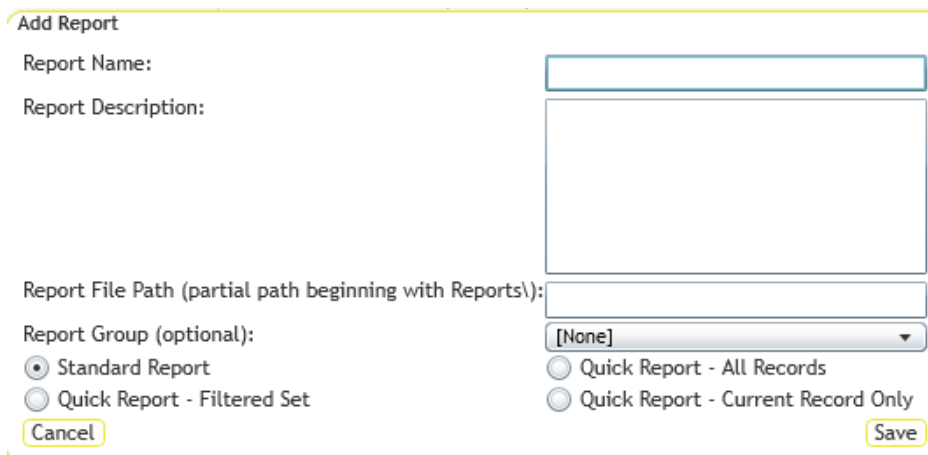

Report Group: All

Report Name	Report Description
Crew Assignment Report - All Addresses	Lists Work Orders grouped by Crew that shows all addresses.
Employee Hours by Equipment Summary Report	Lists employee usage (in hours) by equipment. This report will only evaluate e
Employee Usage Detail	Details all Work Order Information each employee has been associated with
Employee Usage Summary Report	Summarizes Total Cost, Units, and Average Rate per Employee.
Equipment Hours by Employee Summary Report	Lists equipment usage (in hours) by employee. This report will only evaluate e
Equipment Usage Detail Report	Lists Start and End Dates, Cost and Quantity of Equipment along with Task and
Equipment Usage Summary Report	Summarizes Cost and Quantity information of Equipment used in Work Orders.
Fluid Usage Detail Report	Lists Start and End Dates, Cost and Quantity of Fluid along with Task and Work
Fluid Usage Summary Report	Summarizes Cost and Quantity information of Fluid used in Work Orders.
Main Task Summary Grouped by Category	Main Task with WO cost grouped by Category.
Main Task Summary Report	Count and Total Cost of Work Orders by Main Task
Main Task Summary with Hours Grouped by Category	Main Task with WO cost and Employee and Equipment hours grouped by Catego
Material Usage Detail Report	Lists Start and End Dates, Cost and Quantity of Materials along with Task and W
Material Usage Summary Report	Summarizes Cost and Quantity information of Materials used in Work Orders.
Monthly Open Work Orders Chart by Status/Cat	Dashboard report showing all open work orders for the current month by categ
Monthly Open Work Orders Chart by Status/Cat/Prob	Dashboard report showing all open work orders for the current month by categ
Monthly Open Work Orders Chart by Status/Cat/Task	Dashboard report showing all open work orders for the current month by categ
Monthly Open Work Orders Chart by Status/Crew	Dashboard report showing all open work orders for the current month by crew

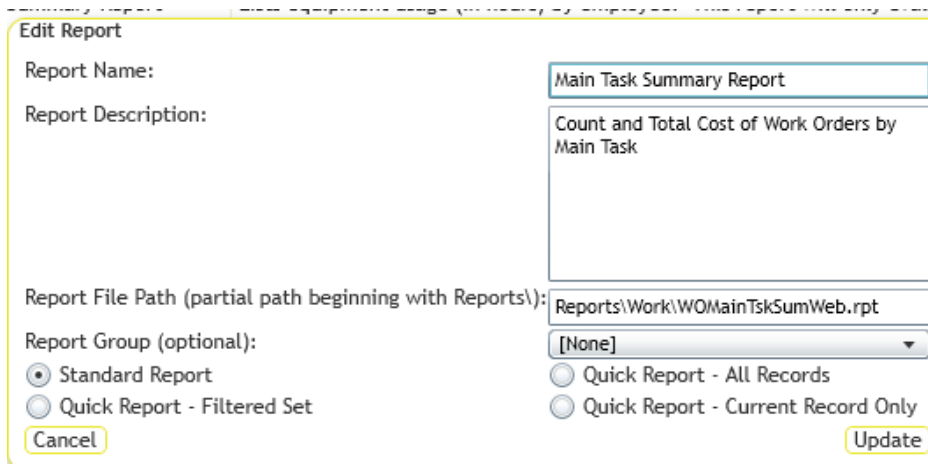

All Records Filtered Set Selected Records

View as PDF Send to Email View as HTML

4. To add a new report, click the Add button . The following dialog will appear:

5. Enter a **Report Name**, **Report Description**, and the **Report Filename** (starting with **Reports\**) then the folder name where the report is located followed by a backslash (**Work\**) then the name of the actual **.rpt** file. Remember to add the **.rpt** portion on at the end of the report filename.

6. Choose the type of report this will be:
- Standard Report - The report will be run by clicking the report tool, selecting the report and how to run it, and running it.
  - Quick Report - All Records - Adds the report to the quick report dropdown list next to the report tool. The report will always be run against all records.
  - Quick Report - Filtered Set - Adds the report to the quick report dropdown list next to the report tool. The report will always be run against the current filter set.
  - Quick Report - Current Record Only - Adds the report to the quick report dropdown list next to the report tool. The report will always be run against the current record.
7. Click **Save**.

# Adding Custom Web Reports (V2015 and Beyond... for now)

The Lucy software is moving the web design to be used as Software As A Service (SAAS). To accommodate this direction, the Custom Web reports are handled in a different way.

There are two locations that Lucy will now use to manage custom reports.

- One is a new folder that can be seen in `inetpub > wwwroot > LucyWeb` that is called **ReportsCustom**. The client should **NEVER** be in this folder.
- The other is a new location that the client sets up. (**Report Share**) Once this is set up and the existing reports moved into this new folder then this folder should not be directly used by the client unless copying a report to be modified. Indirectly, the new custom reports will be uploaded to this location.

## Understanding the Process

### How Lucy Manages Custom Reports

Lucy makes it easy for an agency to manage its custom reports by managing the file locations for them and providing an easy user interface for uploading report files. To make this process work there are several components on the back end. The following table describes those components and the diagrams show how they work together to complete a process.

### Components

---

<b>Lucy Web Reports Tool</b>	A tool that enables <b>Lucy Web</b> users to add, update and run <b>Lucy</b> reports.
<b>Document Server</b>	A <b>Lucy Web Server</b> application that enables users to move files (including reports) around using <b>Lucy Web</b> .
<b>Report Share</b>	The folder that stores a user-accessible copy of each custom report's .rpt file. <ul style="list-style-type: none"><li>• The path is set in the <b>Lucy Administration Tool &gt; System &gt; Settings &gt; Documents &gt; Path where reports are stored</b> setting.</li><li>• <b>Lucy Web</b> does <b>not</b> run reports from this location.</li><li>• Users can copy reports out of this folder to modify them.</li><li>• The reports in this folder are copied to the <b>/ReportsCustom</b> folder daily.</li></ul>
<b>/Reports Folder</b>	The folder that stores a <b>Lucy Web</b> -accessible copy of each standard report's .rpt file. <ul style="list-style-type: none"><li>• <b>Lucy Web</b> runs all of <b>Lucy's</b> built-in, standard reports from this location.</li><li>• Historically, custom reports were added to this folder and they were mixed in with standard Lucy reports.</li></ul>

---

- Users can copy reports out of this folder to make custom reports.
- The reports in this folder should not be modified.

**/ReportsCustom Folder**

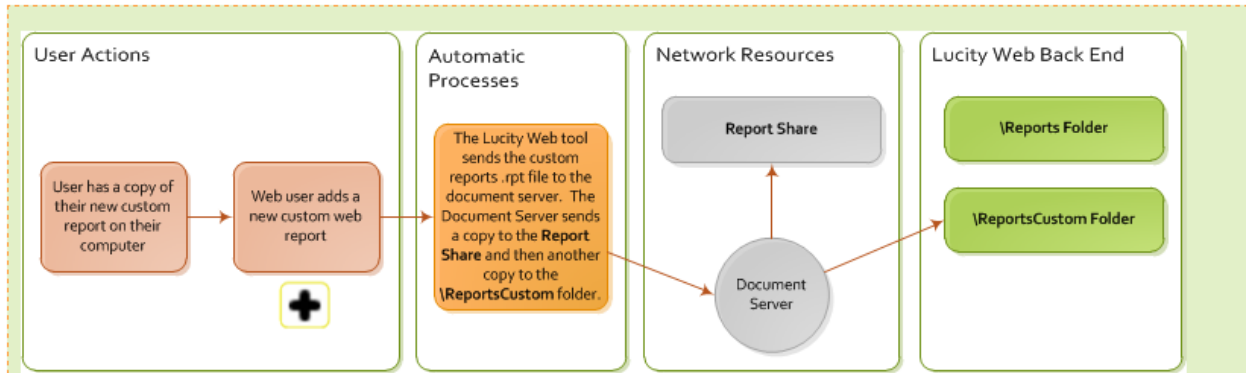

The folder that stores a **Lucity Web**-accessible copy of each custom report's .rpt file.

- **Lucity Web** runs all custom reports from this location.
- The reports in this folder should not be modified.
- The reports in this folder are overwritten with copies from the **Report Share** folder.

**Processes**

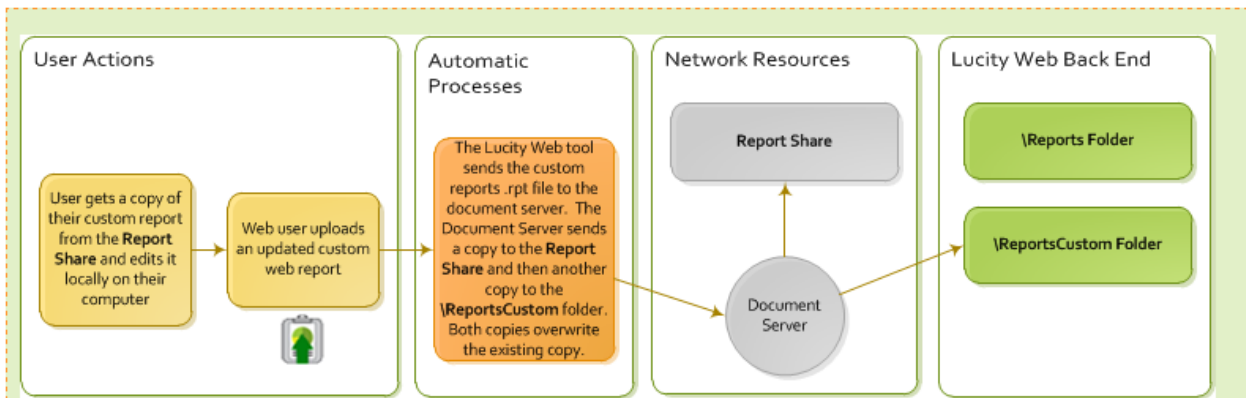

These are the processes that occur in the background when users are working with **Lucity Web** and custom reports.

▼ User adds a custom report

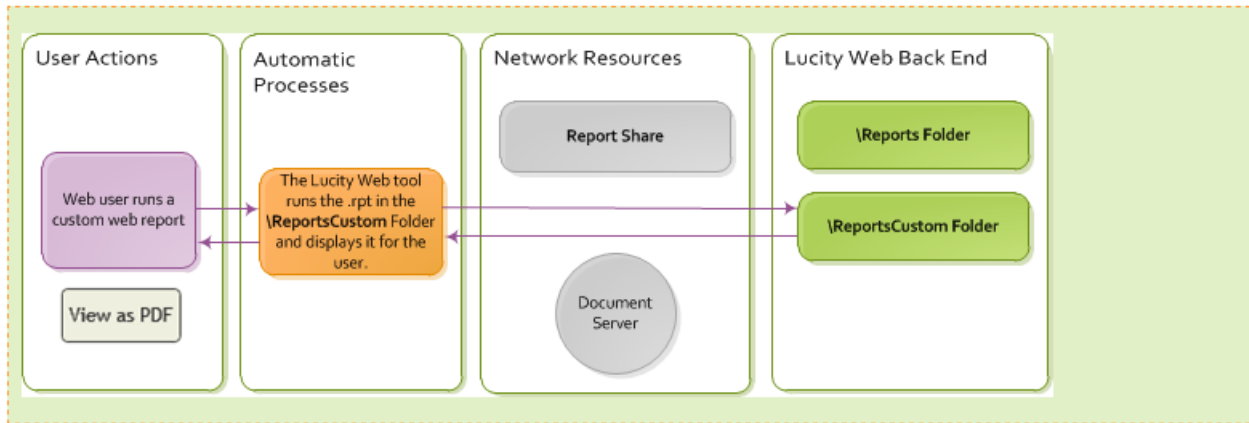

**Note:** Give this process a minute to complete before attempting to run the new report from Lucity.

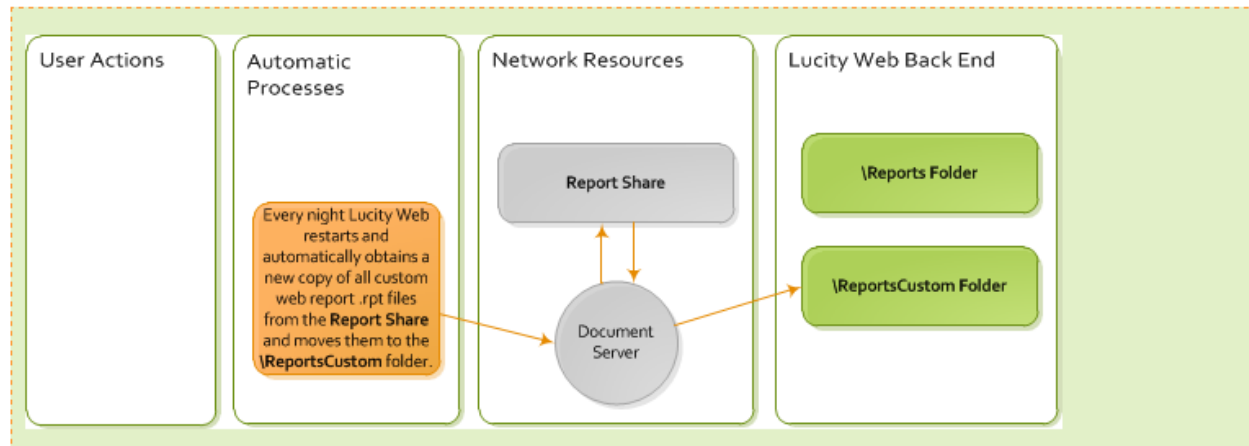

▼ User updates a custom report

▼ User runs a custom report

▼ Automatic custom report processes

## Best Practice for Making the Change

The custom web reports need to be moved to their new location and the path reestablished. If there are problems with mapping to the new location then remove and add them into the system as if they were new reports.

The Document Server must be setup for the report process to work as designed.

### Report Setup

1. If the client doesn't currently have a location outside of Lucy to store and work on custom reports then this should be established first.

It might be a good idea to have one shared file for all custom reports for your company. This is separate from Lucy!

All existing custom reports currently in `wwwroot\LucyWeb\Reports` should be placed in this new folder or subfolders in this location.

Example folder name: `CompanyCustomWebReports`.

2. A second location needs to be established which Lucy will use. This needs to be a folder that the WebServer (IIS) can get to. Ideally, this would not be on the web server. That means it will be on a network share. Something like [\\<Servername>\Shared\CustomWebReports](#).

*Example:* [\\ClientServ-01\WaterGroup\CustomWebRpts15](#)

Where “[\\ClientServ-01](#)” references the server, “WaterGroup” the Shared location and “CustomWebRpts15” the folder name for the custom web reports.

3. This path then needs to be entered in:  
**Lucy Administration Tools > System > Settings... > Documents tab > Path where Reports are stored.** Enter the new path for the Custom Web reports.

*(Example: [\\ClientServ-01\WaterGroup\CustomWebRpts15](#) )*

*Save*

4. Clear Caches  
**Lucy Administration Tools > System > Clear All Site Caches... > Clear All Caches** button.

5. An agency may wish to create a directory structure in this location to separate reports by system; however, this is optional:

[\\<Servername>\Shared\CustomWebReports\Work\](#) <reports for the work program go here>

[\\<Servername>\Shared\CustomWebReports\Sewer\](#) <reports for the sewer program go here>

6. Once the custom report path has been established and the custom reports are in the new location then try using the **Update** feature and browse out to the new location. If there are any problems with reestablishing the report’s path then remove the report and add as new.

## How To Add New Custom Reports

or

Going forward, when adding new custom reports, upload the report using *Lucy Web*. The system will place the report in the report-share automatically.

1. In *Lucy Web*, open the module you would like to add the report to.
2. Click the Reports  button on the toolbar. The *Report* tool opens.
3. To add a new report, click the Add button. The following dialog appears:

## V2015

**Add Report**

Report Name:

Report Description:

Report File Path:

Choose File to Upload:  ...

Report Group (optional):  ▼

Standard Report     Quick Report - All Records  
 Quick Report - Filtered Set     Quick Report - Current Record Only

## V2015r2

**Add Report**

Report Name:

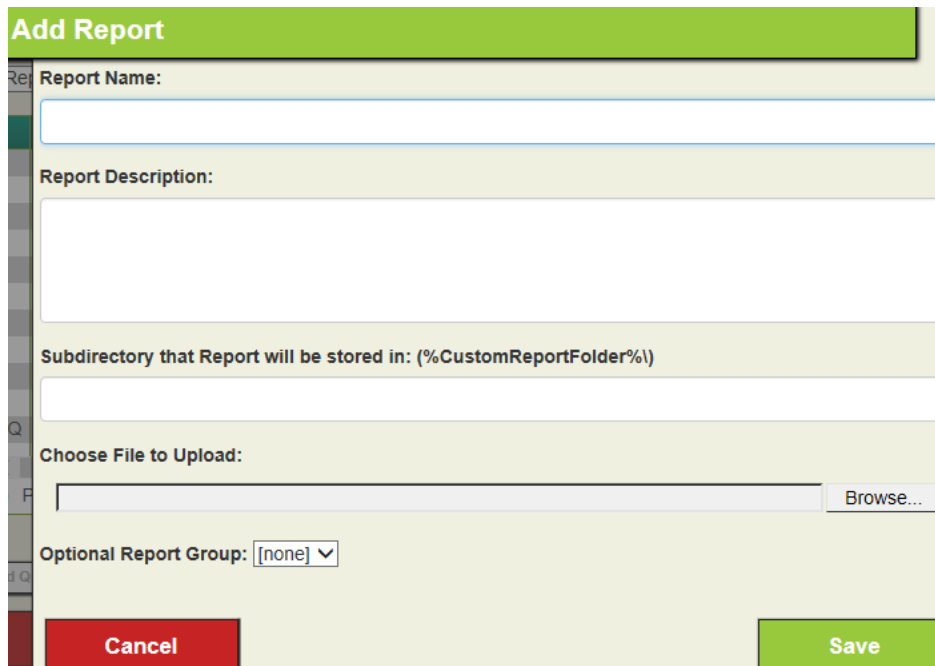

Report Description:

Subdirectory that Report will be stored in:   
*%CustomReportFolder%\*

Choose File to Upload:  ...

Optional Report Group:  ▼

## V2016

4. Enter the *Report Name* and *Report Description*.
5. In the *Report File Path*, enter the name of the subfolder to which you want to upload the report file (ex. Work, Sewer) or leave blank.

*Note: Reports are automatically uploaded to the location specified in the Lucity Administration Tool's "Path where Reports are stored" setting, which may be found in the **System > Settings > Documents** tab.*

*Note: If the folder name entered does not exist, the system will create a folder with that name within the folder to which the reports are uploaded.*

6. Under *Choose File to Upload*, click the Browse button  and select the .rpt file you would like to upload to the web server. The report would ideally be located in the folder established in Step 1 at the top of this document (**CompanyCustomWebReports**) or a subfolder within; however, it can be brought in from any location. This will put the report into the location created for Custom Web reports that was designated in the *System Settings Report File Path*.

*Note: The name of the .rpt file being uploaded cannot match any other .rpt files.*

7. Assign the report to a *Group* (optional).
8. Choose or change the *Type* of report (V2015):
  - **Standard Report** - The report is generated when the user clicks the Report tool, selects the report and chooses how to run it.
  - **Quick Report - All Records** - Adds the report to the *Quick Report* drop-down list, located next to the Report tool. The report always runs against all records.
  - **Quick Report - Filtered Set** - Adds the report to the *Quick Report* drop-down list, located next to the Report tool. The report always runs against the current filter set.

- Quick Report - Current Record Only - Adds the report to the *Quick Report* drop-down list, located next to the Report tool. The report always runs against the current record.

**Add Report**

Report Name: WO Resource Custom Report

Report Description: Modified WO Resource report

Report File Path: Work

Choose File to Upload: WORESOURCECUSTOMWEB.rpt ...

Report Group (optional): [None]

Standard Report
  Quick Report - All Records
  Quick Report - Filtered Set
  Quick Report - Current Record Only

Cancel Save

For V2015r2 these options are available in the Edit mode.

For V2016 the Quick Report option may be added through the Quick Report drop down arrow

Or through the Report tool where the reports are listed. Click on the report to be setup as Quick then select **Add Quick Report** **Add Quick Report**. The Create Quick Report dialog will open where the various reporting options can be setup.

**Create Quick Report For : Main Task Detail Report**

All Records
  Filtered Records
  Selected Records

**As:**

Basic View
  Advanced View

Cancel Save

9. Click *Save*.

## Editing Reports

or

Edit

Editing allows changes in the Report Name, Description or Grouping.

## Updating Custom Reports

or

Update

When existing Custom reports need to be revised, this should be done outside of the Lucy system. The revised reports could be worked on or loaded into the location established for your company, mentioned in step 1 (Example: **CompanyCustomWebReports**).

1. Open *Lucity Web* and go to the module associated with the report.
2. Click the Reports button  on the toolbar. The *Report* tool opens.
3. Select the report to update from the list and click the Update Report File button.

*Note: The file name has to be identical to the file being replaced.*

4. Click the Browse button and select your updated .rpt file from the location of the revised report (Example: **CompanyCustomWebReports**).
5. Click **Update** or **Save** depending on the version.
6. The new copy of the report will be uploaded and will replace the existing report file in the Lucy system (the location established in the System Settings Report Path).
7. Wait a minute before trying to run the updated version of the report. This allows the system to cycle and use the revised report.

*Note: The reports that Lucy provides with the software (standard reports) cannot be updated.*

## Deleting the Report

For version **2015 sp0**, if the User's Report Security isn't set up properly, a user can delete the entire report file. This caused problems with several clients so this was changed.

In **2015 sp1** the Delete option queries if the user would like to delete the report.

If you select **Yes**, the report is removed from the dialog but the report remains out in the Custom Report folder as an orphan. The IT administrator can retrieve it if necessary or delete it.

**V2016** has two options in the Delete process.

First you can delete the path to the report.

The second allows the removal of the actual report.

# Page Limit

## V2015 and Older

When reports are run in the Web with the **PDF** view the page limitation is ten.

In order to increase the web page limit you will need to add a new line statement to the **appsettings.config** file. This is located on your Web Server in the **C:\inetpub\wwwroot\LucityWeb\Config\appsettings.config** folder:

- Open the file with Notepad and paste the following line between the **<appSettings>** and **</appSettings>**:

```
<add key="MAXPDFPAGES" value="10" />
```

- Adjust the **"10"** to the total number of pages you want the report(s) to account for.

*Note: the larger the number the longer it will take to generate.*

The file when complete should look similar to this:

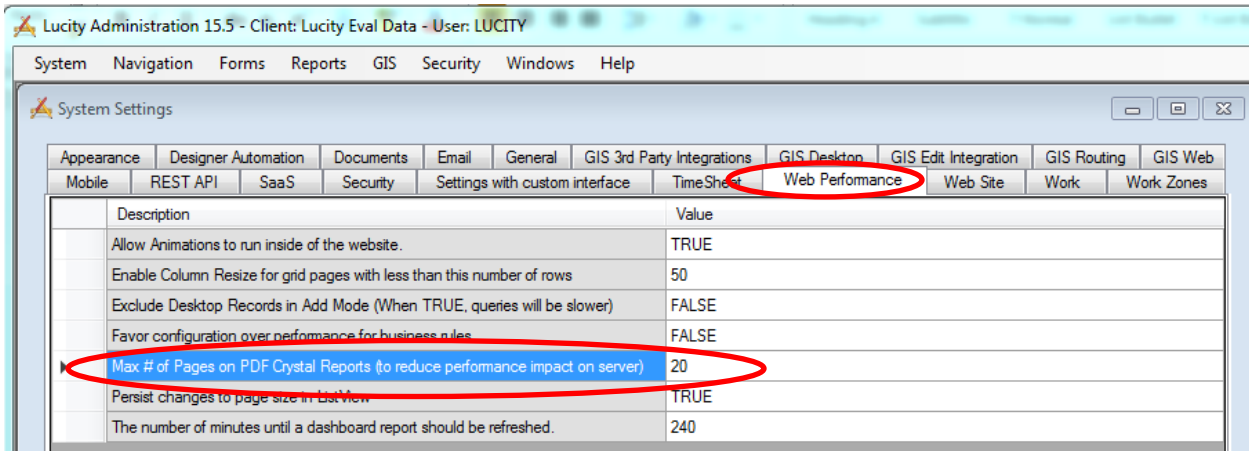

```
<appSettings>  
<add key="MAXPDFPAGES" value="50" />  
</appSettings>
```

This may require an IIS reset to take the changes.

## V2015r2

PDF (**Basic View**) page number can be modified in **Lucity Administration > System > Settings > Web Performance** tab > **Max # of Pages on PDF Crystal Reports** (to reduce performance impact on server).

V2016 uses the new report term **Basic View**.

The screenshot shows the 'System Settings' window in Lucity Administration 15.5. The 'Web Performance' tab is selected and circled in red. The 'Max # of Pages on PDF Crystal Reports (to reduce performance impact on server)' setting is highlighted with a red oval and has its value set to 20.

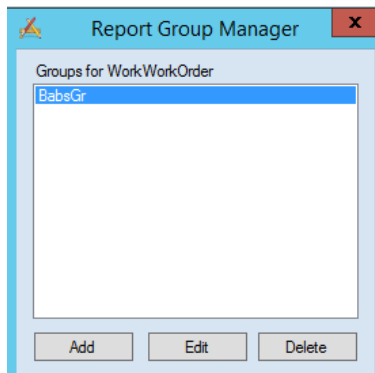

Appearance	Designer Automation	Documents	Email	General	GIS 3rd Party Integrations	GIS Desktop	GIS Edit Integration	GIS Routing	GIS Web
Mobile	REST API	SaaS	Security	Settings with custom interface	TimeSheet	Web Performance	Web Site	Work	Work Zones
Description		Value							
Allow Animations to run inside of the website.		TRUE							
Enable Column Resize for grid pages with less than this number of rows		50							
Exclude Desktop Records in Add Mode (When TRUE, queries will be slower)		FALSE							
Favor configuration over performance for business rules		FALSE							
Max # of Pages on PDF Crystal Reports (to reduce performance impact on server)		20							
Persist changes to page size in List View		TRUE							
The number of minutes until a dashboard report should be refreshed.		240							

# Web Report Grouping

## V2014R2

1. In Lucy Administration Tools go into Reports > Report Manager
  - a. Select Program
  - b. Select Module
  - c. Select Module Component
2. Click on Report Groups

The Report Group Manager window will show.

- Select *Add* to add a group.
    - Type in a Group Name
    - Save
  - Select *Edit* to edit an existing group.
    - Type in a revised Group Name
    - Save
  - Select *Delete* to delete an existing group.
3. Close the Report Group Manager window.
  4. In the Report Manager select a report to include in a group.
  5. Click *Edit...*
  6. In the Update Report window there is an option for *Report Group (optional)* with a drop down arrow. Select the group the report is to be associated with.
  7. Save  
The Group Name should now show in the Report Group column for the selected report.
  8. Repeat from step 4 for all reports to be associated with the group.
  9. When the Web module's report list is opened, the top left corner now has a drop down box for Report Group. When the group is selected, only the reports assigned to the group will show.

If the newly added group does not show in the list then close Lucy and go into Lucy Administration Tools > System > Manage Web Site Caches...

- Scroll to the bottom and click **Clear all Caches.**
- Close
- Reopen the Web module's report list and the Report group should now be present in the Report Group drop down box.

## V2016

Groups are established from the Report tool listing the reports for the module.

Selecting **Manage Report Groups** opens the following dialog:

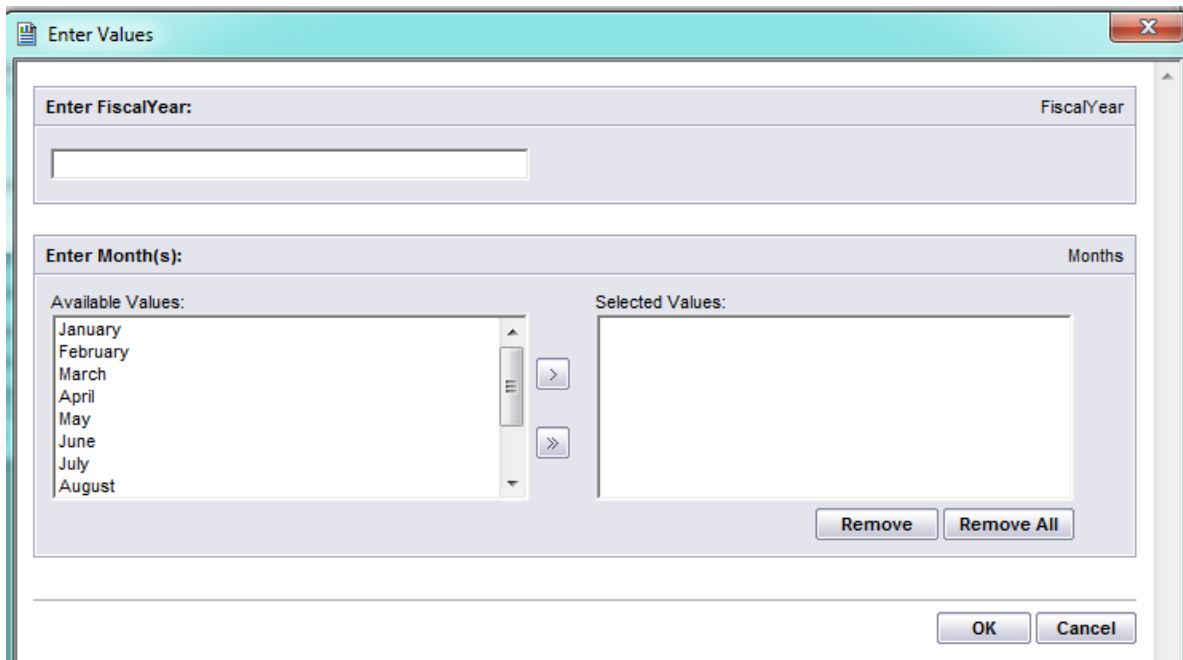

Groups may be Added, Edited or Deleted from here.

## Parameters

Parameters are special Crystal fields that query the user for information to be used in the report before the report will run.

*Example*

Prior to V2015r2, reports used as **Dashboard** reports should avoid the use of parameters. Otherwise the report will show as a link to run the report as opposed to seeing the report.

**Web** reports allow the use of parameters but may have some limitations depending on the version of Lucity and Crystal being used.

Common parameters used in Lucity reports include *subtitles* and *date queries*.

- These can be removed by clicking on the Parameter field and selecting *Delete*.

The report no longer uses the parameter field, but the parameter exists in *Field Explorer*. Unused parameter fields have been an issue in some Web reports. It can be confusing. The unused parameter still queries but then the parameters are not used in the report.

To permanently remove the parameter field in *Field Explorer*:

- Right click on the specific parameter field and select *Delete*
- OR
- Click the parameter field and press the delete key.

Parameter fields are recognizable by the “?” at the beginning of the field:

?Report Subtitle

## Date Selection

To use parameters in selecting a range of dates in Record selection use the following format.

{@RecDt} in[{{?Start Date} to {?End Date}]

Instead of

{?Start Date}<=@RecDt} and

{@RecDt}<=?End Date}

## Multiple Selection

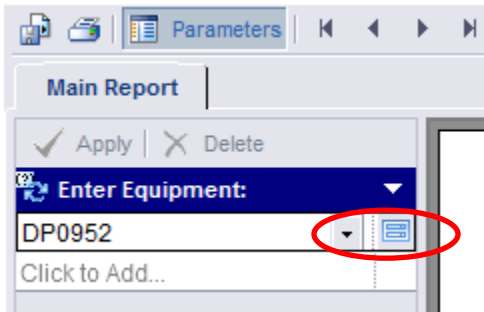

Prior to V2015 a parameter that was set up to allow multiple values only accepted a single value when the report was run in the Web. If the report was developed in Crystal XI or earlier, the report did not allow multiple values to be selected. If the report was created in Crystal 2008 or later it was possible to query again once the report had been run in the HTML view (Advanced view) to allow multiple values. This is set-up within the Parameter field. The *Value Option* is “Show on (Viewer) Panel”. The setting options are Editable, Do not show and Read Only.

Value Options:	
Option	Setting
Show on (Viewer) Panel	Editable
Prompt Text	Enter Equipment:
Prompt With Description Only	False
Optional Prompt	False
Default Value	
Allow custom values	True
Allow multiple values	True
Allow discrete values	True

When this setting is **Editable** and the Web report opened with the HTML view (Advanced view), the **Parameter** button will be active for use to modify the Parameter selection. To use this option, complete the following steps:

1. Click on **Parameters** to open a panel to the left of the report.

2. The actual parameter screen can be opened to either select a new value or multiple values (if the parameter was set up to allow multiples) by clicking on the Parameter value and then clicking the “*Edit parameter value*” button .

3. After the new selection values have been set up, click on **OK**.
4. At the top of the Parameter column select “**Apply**”.

*Note: If parameters are set up in a subreport, they should not have the same name as parameters in the main report.*

## Dynamic Parameters

Starting in V2015, the Dynamic Parameter pick list was available when running the report in Lucity Web. The way to achieve this is by naming the parameter the same as the field name.

1. For example, if the Work Category field was to be set up as a dynamic pick list, the Name would be entered as WKORDER.WO\_CAT\_TY. The Prompt Text usually defaults to the Name field (Enter WKORDER.WO\_CAT\_TY) so this would likely be modified to “Enter Category”.
2. *List of Values* should be set to **Dynamic**.
3. The actual field should be selected for the *Value*. This allows all data within this field to show in the pick list.
4. Within the *Value Options* set the “Show on (Viewer) Panel” to **Editable**.
5. It is also necessary to set the option for “Allow multiple values” to **True**.

Edit Parameter: WKORDER.WO\_CAT\_TY

Edit a parameter and list of values.

Name: **WKORDER.WO\_CAT\_TY** Type: String List of Values: Dynamic

Prompt Group Text:

Choose a Data Source:

New  Existing **WO\_CAT\_TY - Prompt Group**

Value	Description	Parameters
<input checked="" type="checkbox"/> WO_CAT_TY	(None)	[?] WKORDER.WO_CAT_TY

Value Options - Level 1 (WO\_CAT\_TY):

Option	Setting
Show on (Viewer) Panel	Editable
Prompt Text	Enter Category:
Sort Order	Ascending by Value
Prompt With Description Only	False
Optional Prompt	False
Allow multiple values	True

OK Cancel Help

# Barcode Reports

## Crystal XI (Desktop or Web)

Reports developed with Crystal XI or before could show barcodes but it required the font 39 software to be present on the machine the report was run from. The field in the report also needed to be placed in a formula for the font software to create the barcode.

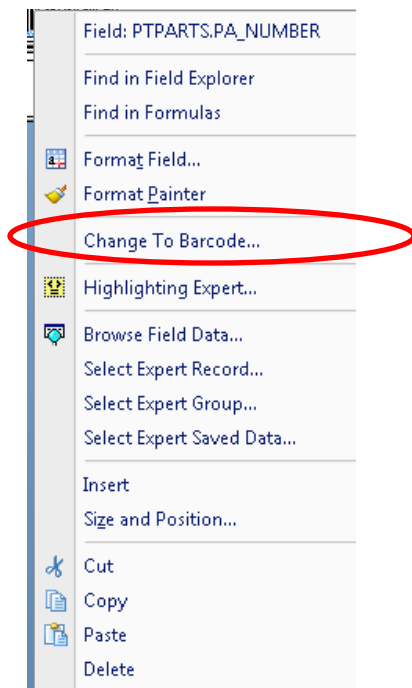

Example: `"*"+uppercase({PTLOCATION.PL_NUMBER})+"*`

Because Lucy Desktop uses Crystal XI to generate reports, this is the only option for developing and running barcode reports in desktop.

## Crystal 2008 (Web only)

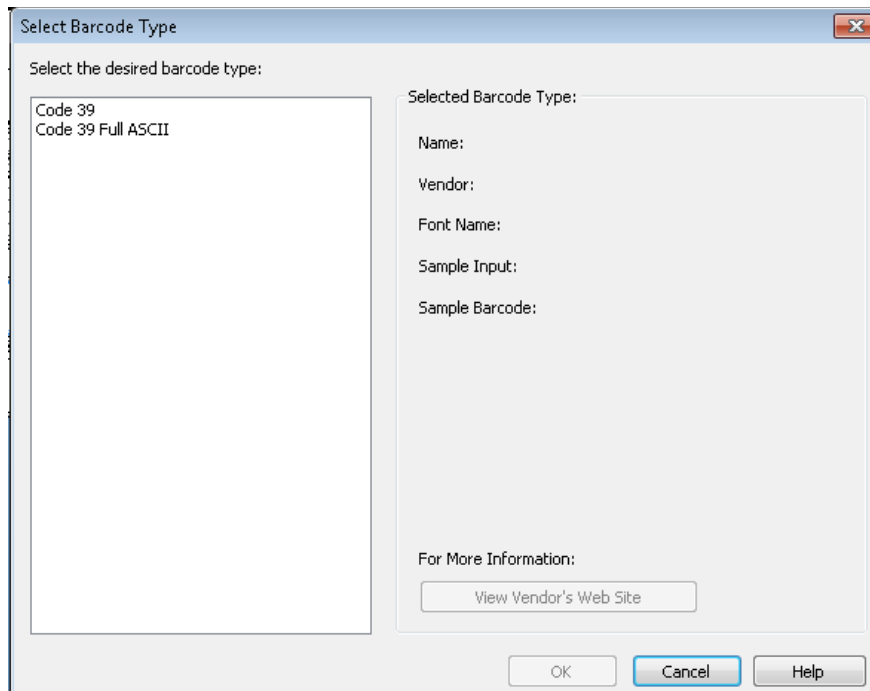

Reports developed with Crystal 2008 or newer have a barcode option to apply to individual fields. Lucy Web uses Crystal 2008 to run Crystal reports so this feature may be used.

For the field to show as a barcode, bring the field into the report and right click. The following options show:

Select **Change To Barcode...**

Then select the desired Barcode Type.

## Report Design view

Parts Bar Coding		Print Date	
Report Subtitle		Print Time	
Part ID	Description	Part ID	Description
Bar Code of ID		Bar Code of ID	
<b>Group #1 Name</b>			
PA_NUMBER	PA_DESC	PA_NUMBER	PA_DESC
GF1a	PA_NUMBER	PA_DESC	
GF1b			
PF		@Page	

## Report View

Prior to V2015r2 the Web report viewing options were **PDF** and **HTML**. Both report views query for any parameters in the report.

The **PDF** view shows the report with a scrolling format - 10 page limit (unless modified).

The **HTML** view shows the report as paged with a Parameter tab at the top. If the report is set up with editable parameters, this tab would open the parameters to be modified and applied for the report to run again with the new parameters. The **HTML** view is also available to export.

For V2015r2 sp0 the web viewing options remain the same. The Dashboard reports have changed the viewing options to **Report** (old **PDF** - with 20 page limit unless modified in Settings) and **Paged Report** (old **HTML**).

For V2015r2 sp1 the viewing options changed for both Web and Dashboard. **Basic View** (old **PDF**) and **Advanced View** (old **HTML**).

# Dashboard Reports

## V2015 and Older

Dashboard reports prior to V2015r2 were set up in Lucy Administration Tools.

To add a standard Dashboard report to your Dashboard, do the following:

1. In *Lucy Admin Tools* click on **Dashboard > Dashboard/Preferences**.
2. If **Lucy** is in the list of users on the left, select it and click **Edit**. If it is not there, click **Add**.
  - If you have to **Add**, then on the next screen select **Lucy**.
3. On the **Dashboard tabs** screen click **Add**.
4. Give the tab a name then click **Add** to add a frame.
5. Give the frame a name then click **Add** to add a plugin.
6. Select **Crystal Report** from the list, give it a name if desired and click **OK**.
7. Once a *Plugin Type of Crystal Report* is selected then an **Add Report** dialog is opened.
  - The *Show Only Dashboard Reports* option will show a list of reports created with no parameters and to fit a frame size.
  - If this option is unchecked then all reports are available to add to Dashboard. If the report has a parameter it will show as a link to open the report.

**Add Report**

Show Only Dashboard Reports

Dashboard reports are defined by having a filename that starts with 'dash' and require no parameters to run. Non-dashboard reports can be used but will show up as a link to the report and require the user to supply needed parameters.

8. Select the module you want the report to run in by using the three drop downs.
9. Select the report to run under *Report Name*.
10. To change the filter, click the *Acquire* button. Click **OK**.
11. Click **OK**, click **OK**, click **OK**, click **Save**. Click **Close**.
12. The report should now show in the web dashboard.

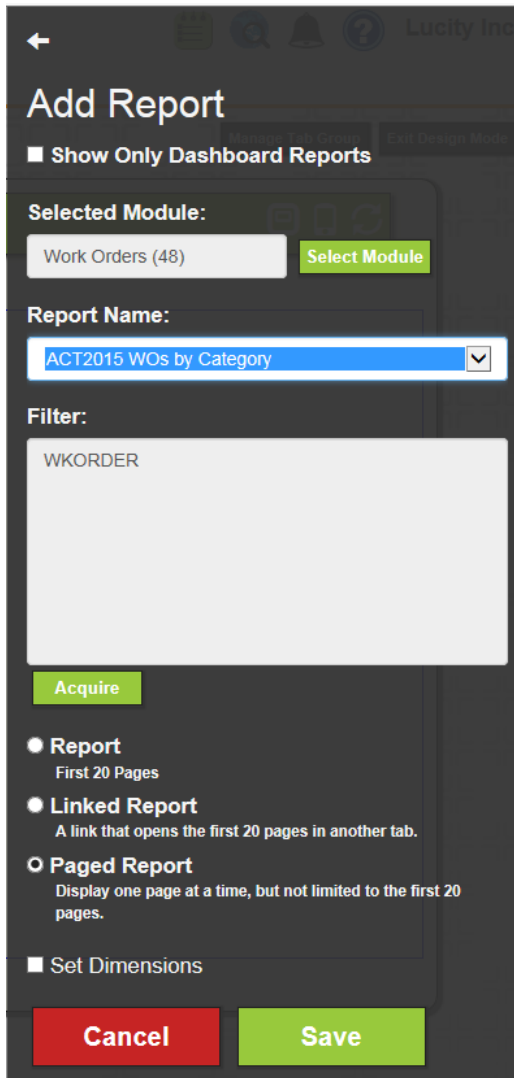

## V2015r2

As of V2015r2 the Dashboard design has been removed from Lucy Administration and the Dashboard is now set up in the Web screen.

When Crystal Report is selected then the following dialog opens.

Note: V2015r2 sp0 viewing options do not work correctly. Report (old PDF) shows as blank, Linked shows as old PDF and Paged Report (old HTML) shows as old PDF. There is a patch. It was corrected in V2015r2 sp1.

For a report with parameters set up in Dashboard as **Advanced** (old HTML), the parameters will be

offered before the report runs. Refresh  will reoffer the parameters.

## Open Work Orders

**+ Work Orders (1376)**

Please Enter a Subtitle (not required)

**Enter Category:**

- Auxiliary Equipment
- Backflow Preventors
- Blue River BLDG
- Bridge Maintenance
- Bus Stops
- Cabinet
- Call Center
- Conductor Cabling
- Conduit Cabling
- Curb
- Detention Basins
- Equipment
- Facilities

**Enter Test Unused Parameter:**

*Your Filter has been converted for Crystal Reports.*

# Field Growing

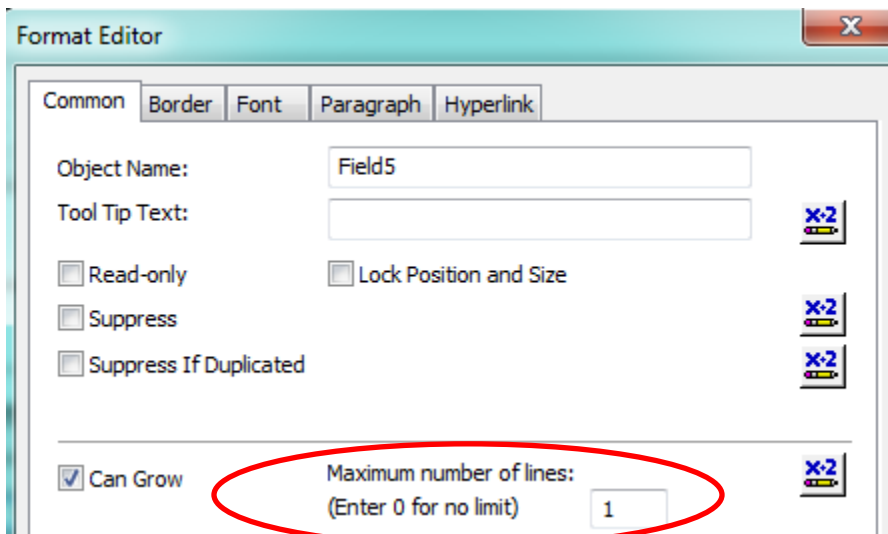

Depending on the field size and Field formatting, there may be issues with the field growing horizontally when run in the Advanced View (HTML). If a field has not been set up to grow vertically and if the value in the field is longer than the space provided by the field in the report, the field will grow horizontally into the next field.

Category	Main Task
Sewer Service	Waste Water Quality Commercial
<u>Description 1</u>	
821 S ROANOKE ST	
820 S ROANOKE ST	
Residential Collection	Residential Collections

To correct this, the field may be set up with the *Can Grow* option in *Format Field*. This will allow the field to grow vertically.

Category	Main Task
Sewer Service	Waste Water Quality Commercial
<u>Description 1</u>	
821 S ROANOKE ST	
820 S ROANOKE ST	
Residential Collection	Residential Collections

Some reports do not have the luxury of allowing a field to grow vertically, like a Detail report, where many fields are grouped together in the same report section. If there is no room to expand the field horizontally and a clipped field is acceptable, then in the *Can Grow* option the field can be limited to grow one line. This will lock the field size in.

## Font

For Web reports avoid the use of the Calibri font. There are issues with viewing the report as PDF.

## Web Date Filters

If a date filter is built in the desktop, the filter uses the “#” sign.

```
WKORDER.WO_STRT_DT BETWEEN #01/01/2014# AND #12/31/2014#
```

If this is used in the web and the report is run with ‘From Filtered Set’, it will error.

Instead use the single quotes in the filter.

```
WKORDER.WO_STRT_DT BETWEEN '01/01/2012' AND '12/31/2012'
```

## Wildcard Use

For Lucity desktop filtering the wildcard symbol is the asterisk “\*”. If a filter is built in the Lucity web version the wildcard symbol is the percent sign “%”. Crystal recognizes the asterisk. The web version converts the symbol before it runs the report. If you typically use the percent sign for a wildcard make sure that when you are working in Crystal that you use the asterisk.

## Logged in User ID and Logged in Employee Code

For versions 7.4 or later the **Logged in User ID** and **Logged in Employee Code** can be brought into Web reports straight from Lucity. This information is being brought in from the Employee module in Work and is set up much like the “ViewSecuredFields” parameter.

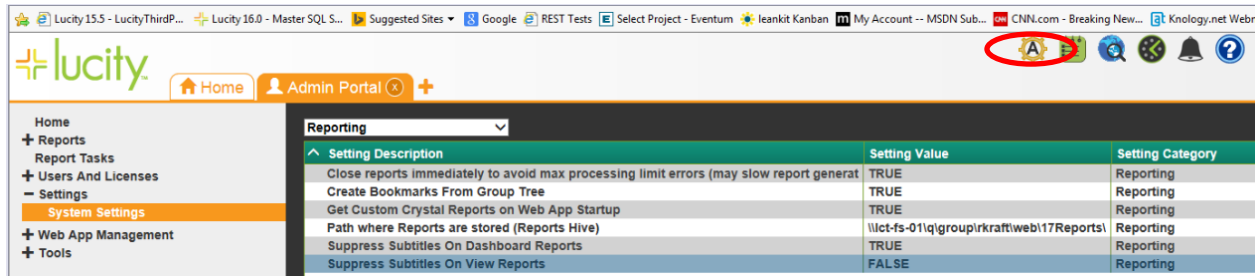

- For the User ID, create a new parameter called **LOGGEDINUSERID**.
- For the Employee Code, create a new parameter called **LOGGEDINEMPCODE**.

Both parameters are *String* type fields.

Drag the parameter fields into the report. When the report is run from Lucity, these fields will populate with the correct Logged in User information.

# V2016r2

Many Lucity Administration Tools are now found in the Web Admin Portal.

## Subtitle Suppression

Two new settings available are:

- **Suppress Subtitles On Dashboard Reports**, that removes the subtitle parameter for **Dashboard** reports.
- **Suppress Subtitles On View Reports**, that removes the subtitle parameter for reports run from modules.

For the Subtitle suppression to work correctly, the Subtitle parameter name must be “Report Subtitle”.

## Group Tree Bookmark

Another new setting:

- **Create Bookmarks From Group Tree**, that allows users to create bookmarks within the output of a basic report.

## Web Performance

Reports take memory when they run. Each subreport is seen as an individual report when the reports run. If many individuals have numerous reports running on their dashboard, the system may slow down.

One possible solution to this issue is using Crystal Reports Server or SAP Business Intelligence Server (Crystal Reports Enterprise). This would allow reports to be offloaded to a server dedicated to that purpose. This is now supported in V2016r2. This is available to purchase through SAP.
