

Lucity Success Story – Merging Systems

Presented to Lucity ACT 2016
Monday, September 12, 2016

Rick Lisenbee, City of Tulsa
Water & Sewer IT Systems Manager
Technology Liaison for Tulsa Metropolitan Utility Authority (TMUA)

About Tulsa

- Located in NE Oklahoma on the Arkansas River about half way between KC and Dallas
- City population 400,000; Metro 950,000
- 47th largest city in the US
- Over 200 square miles
- Incorporated in 1898
- 3600 employees
- Mayor as city manager, 9 Councilors, Auditor
- Lot's of pride in our community

Water System Overview

- Raw water comes from 3 lakes in 2 watersheds via 4 major transmission lines
- 2 water treatment plants (90 – 210 MGD)
- 2,300 miles of water main; 15,000 hydrants
- 13 pump stations; 16 tanks & reservoirs
- 140,000 metered accounts serving > 500,000 residents
- www.cityoftulsa.org/city-services/water.aspx

Wastewater System Overview

- 1,960 miles of sewers
- 62 lift stations
- 4 wastewater treatment plants (103 MGD avg day flow)
- 3 labs, Compliance, IPT, and FOG programs
- www.cityoftulsa.org/city-services/wastewater.aspx

FATS, OILS AND GREASE
CAN CAUSE PROBLEMS IN
THE SEWER SYSTEM.
THESE INCLUDE:

- FRYING OIL
- SALAD OIL
- MEAT DRIPPINGS
- BACON FAT
- GREASY LEFTOVERS
- SHORTENING OR LARD

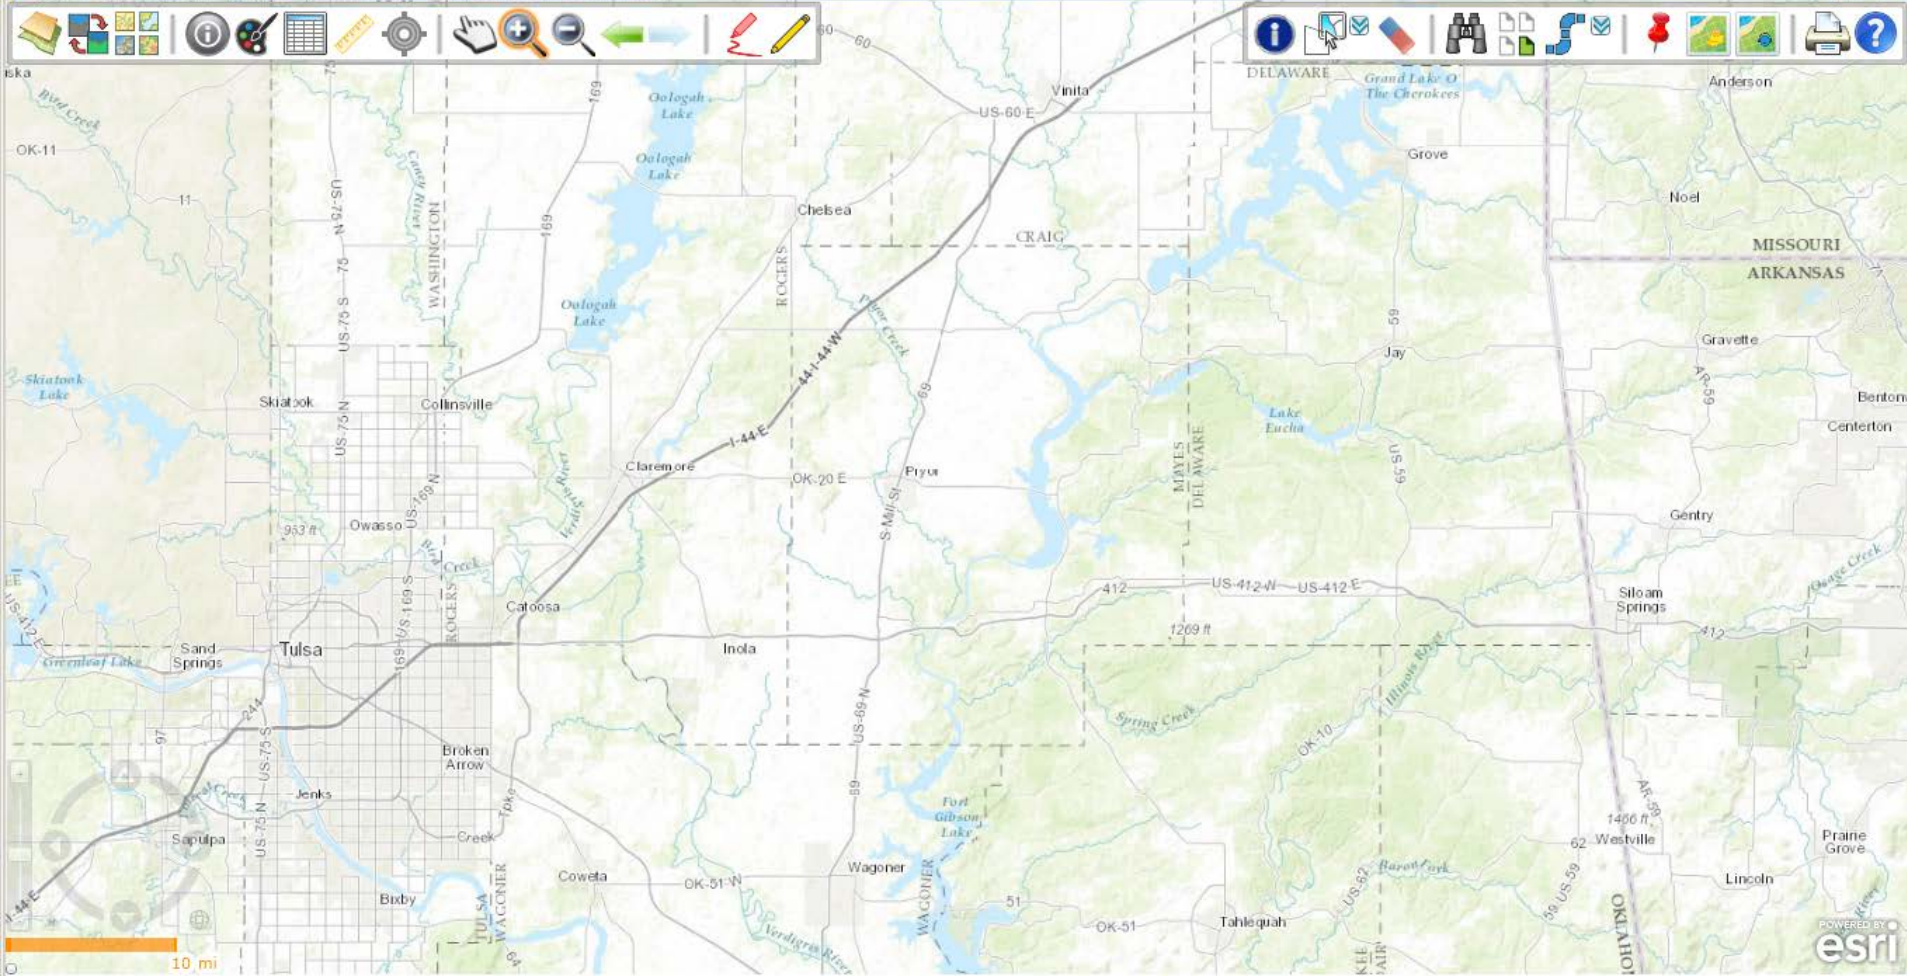

Water & Sewer Service Area

CITY OF
Tulsa
A New Kind of Energy.

Lucy Map - Internet Explorer provided by internet provided by the City of Tulsa

9/11/2016

TMUA Financial Standing

- Tulsa's water and sewer budget
 - \$215 million combined operating budget annually
 - \$70 million CIP annually for Water & Sewer alone
- Every year Tulsa's City Council is asked to raise rates by up to 10% to cover capital projects and continually increasing operational costs.

TMUA vs. City of Tulsa

- City of Tulsa owns the water and sewer Utility
- TMUA contracts with the City to govern the Utility (mostly to manage long-term debt)
- TMUA can:
 - ❖ Operate Utility themselves and hire staff
 - ❖ Outsource to a private operator
 - ❖ Hire the City to operate
- TMUA Board hired the City to operate its own assets.
- Problem: TMUA and City priorities do not always align

Supporting Departments

- Engineering (Planning, Design, Construction, Survey, Graphics, Capital Projects)
- Finance (Utilities Billing, Accounting, Payroll, Grants, Inventory Control, Purchasing)
- Customer Care (Call Center)
- Information Technology (Servers, Network, Database, Radio, Client Support, Application Support, Development, Deployment)
- Real Estate (ROW, Easements, City Property)
- Security (Physical Security and Cybersecurity)

Supporting Departments

- Communications (Public Relations, Internal Communications, Web Content)
- Human Resources (Recruiting, Classification, Compensation, Benefits, Labor Negotiations, Workers Comp, Safety)
- Development Services (Plan Review, Neighborhood Inspections, Permits, Licensing)
- Fire (Hydrant inspections and testing)
- Equipment Management (Fleet)
- All of these functions used to be Public Works

TMUA conducts Utility-wide Assessment

- City's KPMG study recommended to sell the Utility
- TMUA conducted its own comprehensive assessment which found:
 - Tulsa is within industry norms for quality and cost-efficiency
 - Rates will grow faster than income for decades to come due to increasingly stringent regulations and aging infrastructure
 - Program Improvements could reduce rate increases by 20 to 30 percent

TMUA launches Utility Enterprise Initiative (UEI)

CITY OF
Tulsa
A New Kind of Energy.

Asset Management (AM) is the Foundation of the UEI

- ❑ AM strategy aligns with TMUA strategic plan
- ❑ AM governance needed to maintain consistency and engagement
- ❑ AM performance management efforts must capture the data to predict asset lifecycle
- ❑ Analysis of asset data necessary to optimize the balance between maintenance and capital investments to extend useful life of assets.

Asset Management Strategy

- Follow PAS55 & ISO 55000 framework for asset management

- Whole life cycle management and cost analysis
- Risk Management
- Capital Prioritization

- Improved Information Management

- Levels of Service and Performance Monitoring
- Continual Improvement

Key Asset Management Goals

- Consider the whole asset life cycle
- Use life cycle cost analysis in developing asset management plans and decision making
- Implement a risk-based approach to managing assets and identifying replacement and rehabilitation needs

A Key Asset Management Objective

- Implement Utility Wide CMMS
 - ❖ Manage work orders
 - ❖ Track lifecycle costs
 - ❖ Monitor asset condition
 - ❖ Improve maintenance practices

About Data

CITY OF
Tulsa
A New Kind of Energy.

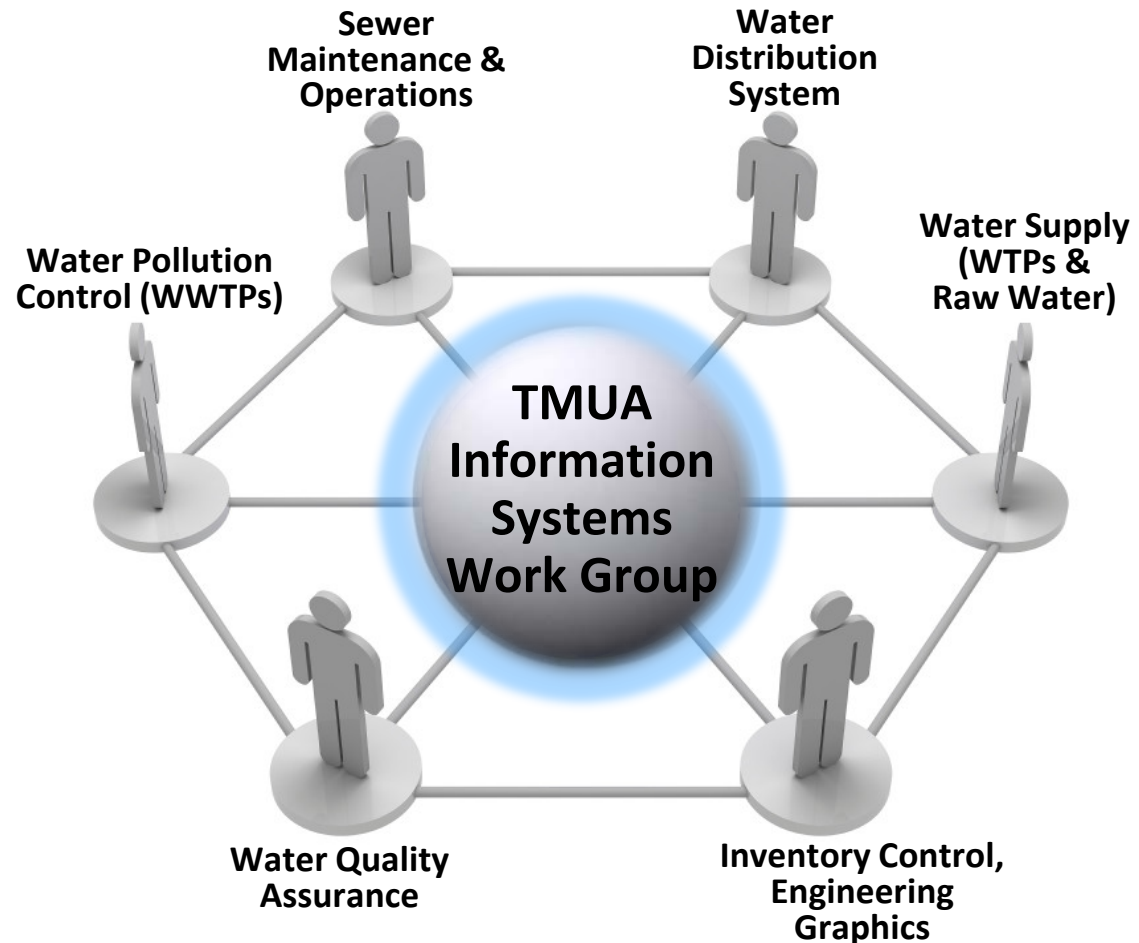

DATA IS LIKE
WATER. THE
WORLD IS
COVERED IN IT
BUT ONLY 3% IS
CURRENTLY
USABLE.

TMUA Information Systems Group

Formed Information Systems Governance Work Group

- Comprised of reps from each aspect of Utility operations
- Monthly meetings with formal agendas
- Decisions made as a group

CMMS Implementation Directive

- “Thou shalt be willing to make compromises for the greater good of the Utility.” - Clayton Edwards, Director of Water and Sewer.

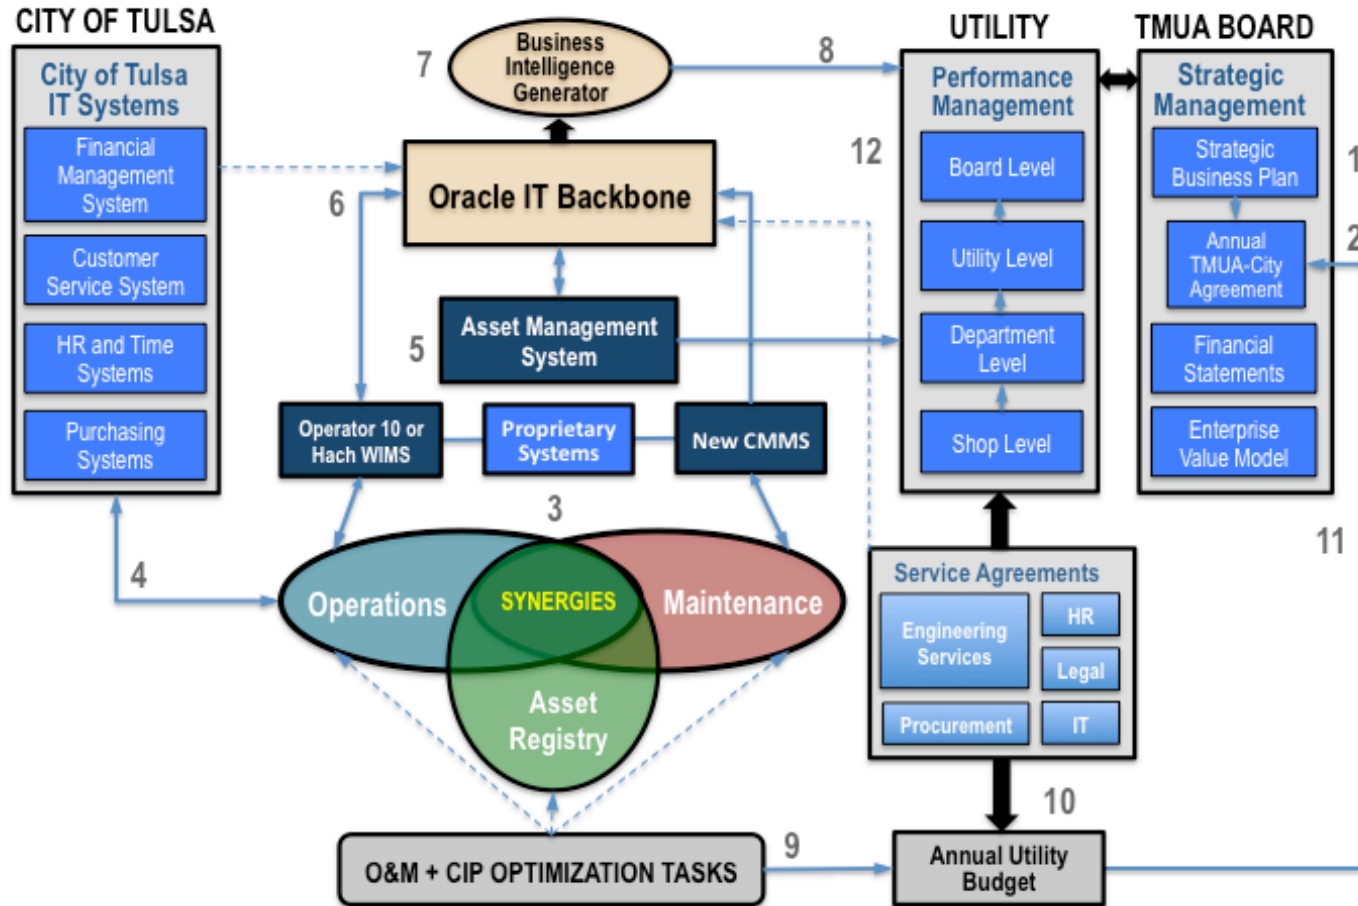

AMIS/CMMS Goals-TMUA Board

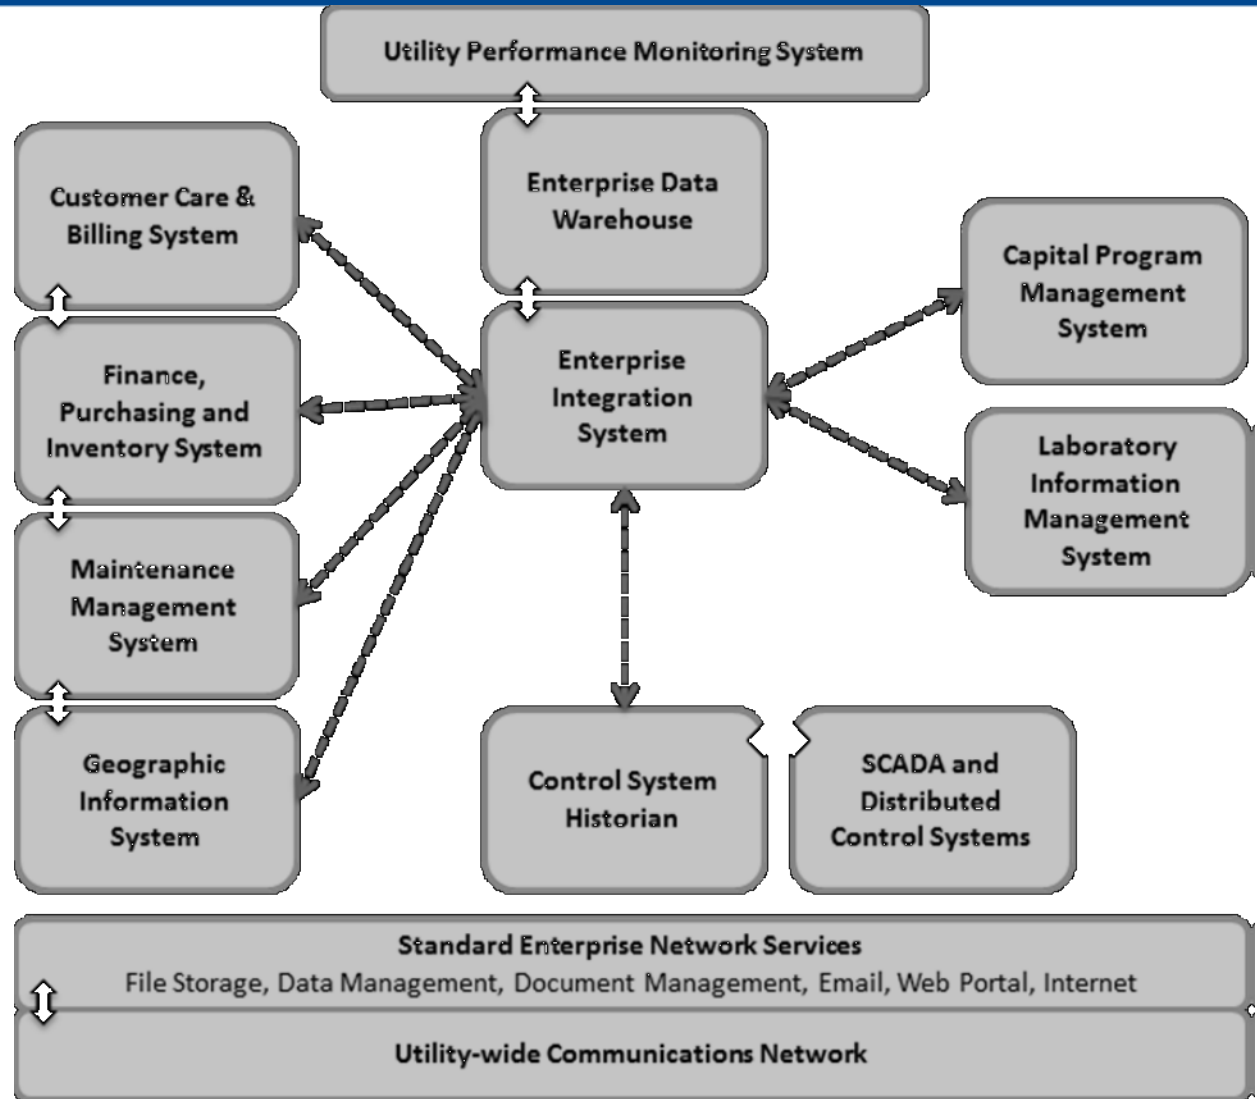

- Collect detailed operational data related to work management trends, asset conditions, costs of operations, and customer service responses that can be rolled into the departmental weekly status report.
- Build a centralized data repository of asset data for use by the performance management system by consolidating data that is now collected in log books, databases, and spreadsheets.
- Facilitate efficient data collection for water and wastewater asset performance.
- Replace 7 work order systems with 1 system.

The Grand Scheme per our consulting team

The Grand Scheme per WRF

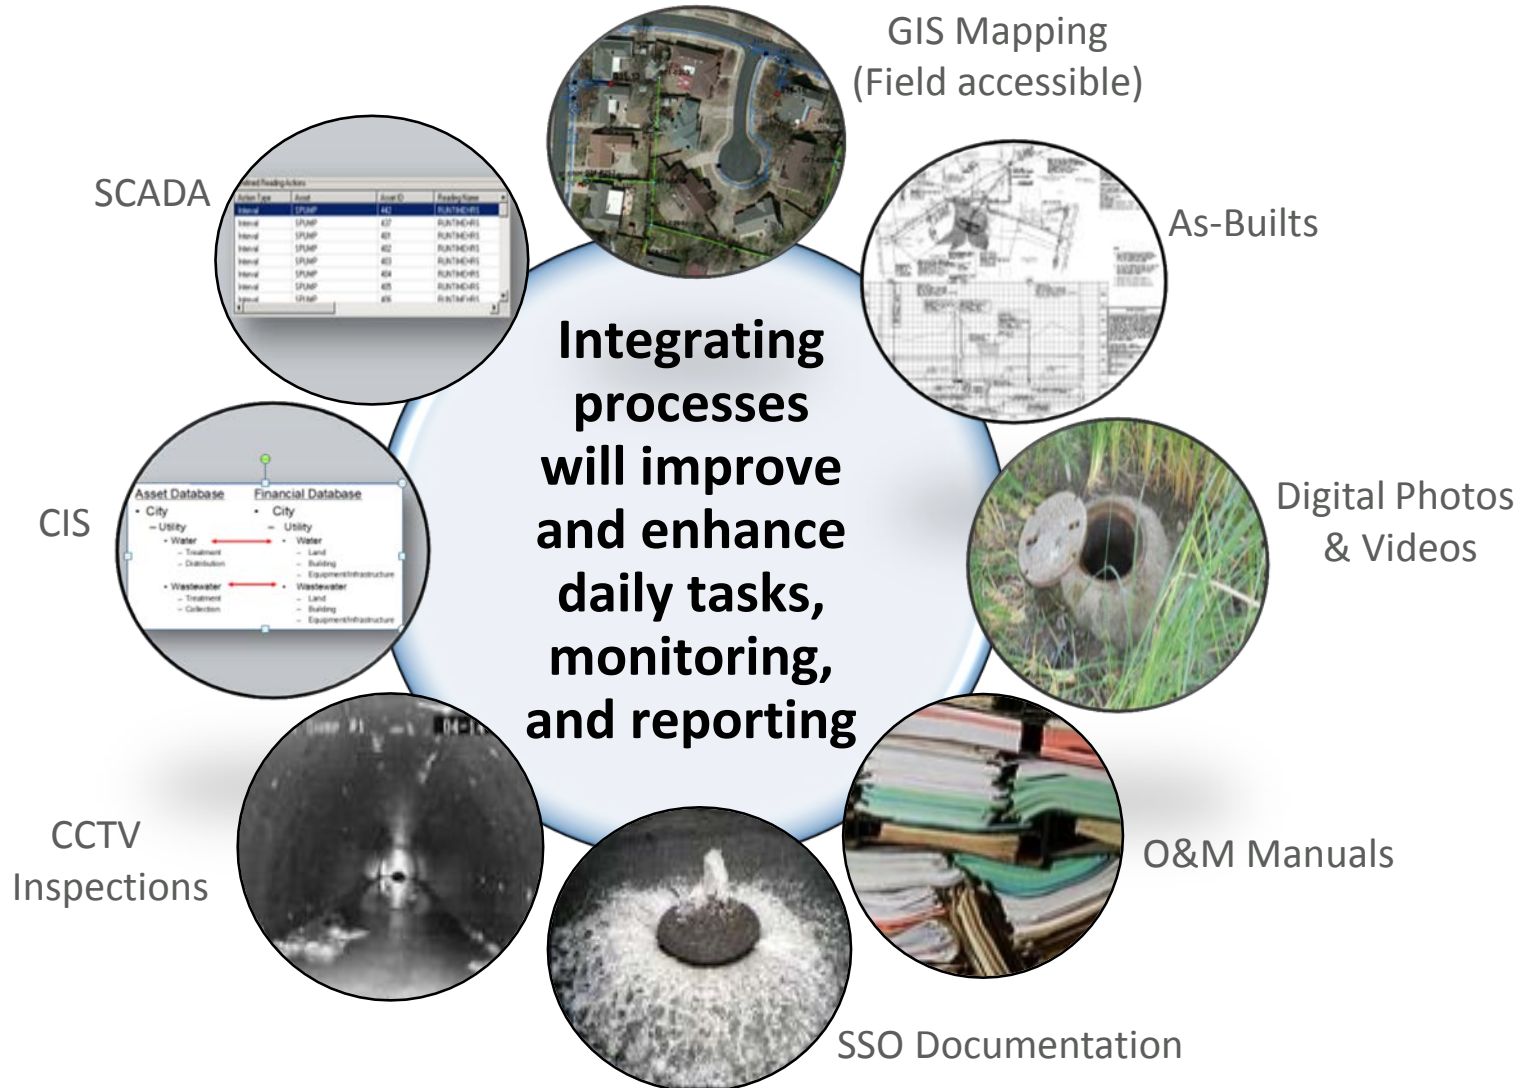

From: High-Performing Information Systems Aligned With Utility Business Strategy
Web Report #4316

AMIS/CMMS Goals-End Users

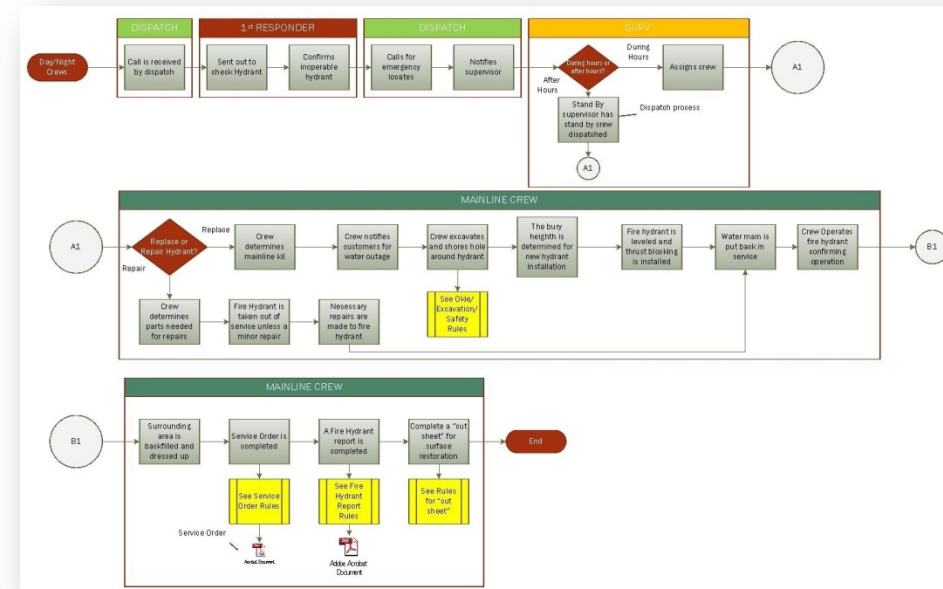

- Save time required for manual data collection.
- Enable hands-on digital access to work orders, dynamic maps, and related reference documentation in the field.
- Expand usage of the Engineering Atlas by incorporating GIS functionality and dynamic map interaction for all field and operations users.
- **Prime Directive: Implement a measurable improvement in a work activity for each worker in utility operations.**

Single AMIS – Gives you the Power of Integrated Data

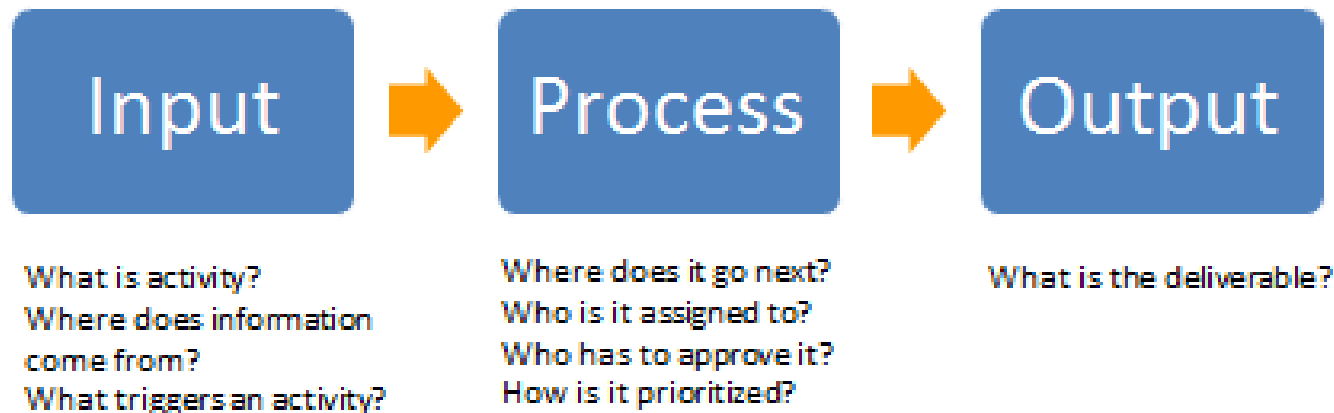

Evaluation of Current Work Environments

- Live in Their World
 - ❖ Work with each group to understand their business
- Map Business Processes
 - ❖ Document triggers, participants, inputs, transformations, and outputs for each step
- Review Current Reporting
- Review and improve existing processes as needed

Work Flow Processes

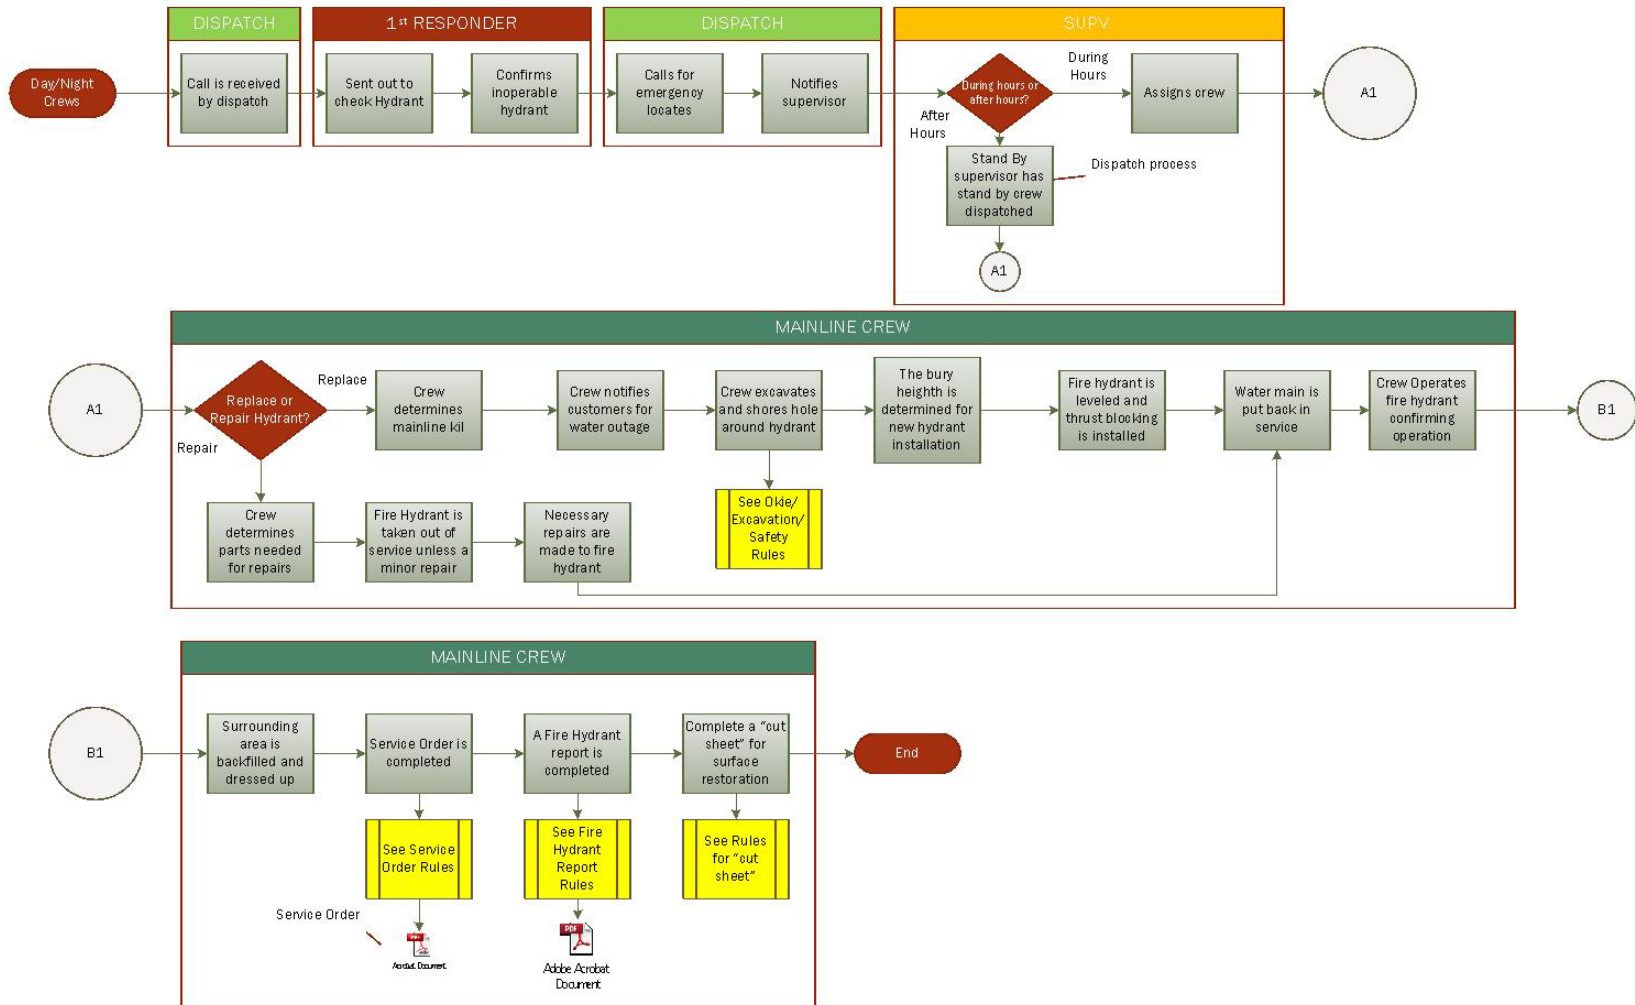

- Asset Inventory
- Inspections
- Preventative/Corrective Maintenance
- Service Requests/Work Orders
- Parts and Equipment Inventory Tracking

Process Mapping

Reports

Merging Data From Tool Time for AB Jewell Water Treatment Plant

- Tool Time is a custom-written tool based on MS Access
- Installed and run on a local desktop at the Plant
- No backup (data was lost several times)
- Only 1 user could use it for input or reporting
- 800+ PM templates did not convert to Lucity and had to be redone
- 32000 historical work orders were successfully converted to Lucity
- Successfully went live in September 2015

Merging Data From VB Scripts for Mohawk Water Treatment Plant

- Custom-written Visual Basic scripts extracted data from SCADA system into spreadsheets
- Installed and run on a local desktop at the Plant
- No backup
- Only 1 user could use it for input or reporting
- No PM templates
- Superintendent who developed the scripts has retired
- Nothing was electronically converted
- Went live for corrective work orders in June 2016
- Still developing PM templates

Merging Data From Custom Work System for Sewer Lift Stations

- Custom-written existing work order system data converted to Lucity in December 2015
- Developer of the original system is also the key system analyst for the Lucity implementation
- PM templates did not convert correctly and had to be rebuilt in Lucity
- Conversion the day before go-live did not allow time to check the data or allow staff to get used to the new format
- Lots of problems with the Asset Hierarchy
- Using the Lucity Equipment module over-simplified the information needed for lift station systems

Merging Data From Hierarchy Tool for Raw Water Pump Stations

- Transition to Lucity was fairly smooth due to 2 staff members that attended last year's Lucity ACT in KC
- Decided to focus usage with just a few key staff
- Asset hierarchy tool developed by a consultant did not fit well in Lucity and made it difficult to identify assets
- Extensive staff time needed to correct the hierarchy
- Successfully went live in March 2016

Merging Data From Antero for Wastewater Plants

- Antero already contained unique equipment numbering
- Focusing usage with just a few key admin staff
- Designing exact replica of Antero work order form in Lucity to print – no change for trade staff
- Extensive staff time needed to correct the hierarchy
- Consultant was able to convert 6400 PM templates from Antero to Lucity
- Antero equipment records already contain likelihood and consequence of failure values
- Go-live now planned for October 2016

Receiving New Assets

- Defining a template for contractors and consultants
- Initial extraction of Lucity data at the beginning of the project provides unique record identifiers
- Using Lucity Import Tool to process new data that conforms to the template
- GIS-based assets must use City-provided first-order survey monuments to tie design plans to real world coordinates

Linear (or GIS-based) Asset Data

Linear Assets

- Water Distribution, Collection System, Raw Water
 - ❖ GIS represented in actual location
- Collect GPS Coordinates
 - ❖ Link Documents
- Add projects while under construction

Migrating GIS Data from Oracle Spatial and Bentley Map to ESRI

CITY OF Tulsa
A New Kind of Energy.

- Integrated asset management concepts into the enterprise-wide GIS
- Applied the ESRI Local Government Information Model
- Leveraged ArcGIS Server Map Services
- Consolidating 3 sources of fire hydrant data

wSystemValve	wHydrant

Merging Other Data into the GIS

CITY OF
Tulsa
A New Kind of Energy.

- Added “under construction”
- Added links to record drawings
- Added county assessor property data from 5 counties
- Added 2ft contours
- Registered Tulsa’s high resolution orthophotography with ESRI as a universal base map

Structure Numbering Synchronized

- Engineering Graphics group went live with ArcGIS for Water & Sewer Atlas Updates in August 2015
- Uses 2-way synchronization between Lucity and ArcGIS
- Previous structure numbering method was manual and prone to errors
- Lucity auto-generates next available valve and hydrant numbers by Atlas Page and manhole numbers by Maintenance District when new features are placed in ArcGIS

Redline Markups

- Proposed projects are illustrated with redlining tools
- Central online system of redlines eliminates a dozen large hard-copy Atlas books containing various notes
- Engineering Graphics also tracks Atlas Correction Requests as Lucity work orders

Merging Data from Custom Work Order System for Sewer Base

- Custom-written existing work order system data will be converted to Lucity
- Conversion proof of concept was successful
- Many specialty functions of the old system do not correlate to Lucity modules
- Developer of the original system is also the key system analyst for the Lucity implementation
- Working closely with admin team
- Consultant researched missing GIS feature attributes
- Also planning to merge Cues Granite video data

Merging Data from Synexus for Environmental Compliance

- Synexus has no GIS component
- Synexus is built on MS Access
- Geocoded sampling sites
- Pulling some data from LIMS also

Merging Data from MS Access for Fats Oils Grease

CITY OF
Tulsa
A New Kind of Energy.

Merging Systems for Water Distribution

- Cassworks – tracks work orders, equipment, inventory in SQL Server with no ties to GIS
- CSD Database – customer service dispatch tracking system base on MS Access
- Breakboard – Web-published, spreadsheet-driven current break activity board
- Breaks and Leaks Database – a separate MS Access database for trend analysis with no tie to GIS
- Meter Database – captures details on meter change out and maintenance activities
- Billing system tracks all service orders

Merging Data from Engineering, Fire, and Water for Hydrants

- Engineering tracked hydrant location and numbering in Water Atlas via Bentley Map and Oracle Spatial
- Water Distribution tracked hydrant details such as manufacturer, install date, etc. in Cassworks
- Fire Department tracked hydrant inspections in Firehouse
- All hydrant data has been merged into Lucity with 2-way synchronization to ArcGIS
- Planning to build Lucity dashboard, workflow, and forms for hydrant inspections

Lucity Manages Data For All Water and Sewer Assets:

- Work history
- Breaks and leaks
- Inspections
- Equipment repairs and failures
- Repair response time and service outages
- Preventive maintenance
- Asset condition and deterioration rates
- Business risk exposure
- Asset life-cycle costs

Expected Outcomes

- Integrated solution (CMMS, GIS, CCTV, SCADA, etc.)
- Improved communication among multiple groups
 - One stop shop for multiple types of information – plans/drawings, photographs/videos, asset details, inspections, work orders, CCTV data, inventory warehousing, SSO records, breaks/leaks, FEMA....
- Ability to replace paper and individual spreadsheets
- Single ‘system of record’ for more efficient roll up of data to support decision making (Performance Mgmt)
- Field access to information (dynamic maps and data)
- Reduced IT management and support for multiple systems (replaces 7 separate systems)

Unintended Benefits

- Staff has rallied around the cause.
- Better collaboration and cooperation utility-wide.
- We all speak the same language.
- We can leverage the GIS for more applications now that it conforms to ESRI's Local Government Information Model.
- Lucity is platform agnostic because of their web approach (HTML5 direction will improve that).
- Ability to link reference documentation in Lucity allows us to capture legacy knowledge.

Unintended Consequences

- Our aggressive implementation plan puts a strain on staff's ability to do daily work.
- Retirements/transitions leave gaps in knowledge that are affecting our understanding of legacy data.
- IT security challenges increase with wider use.
- Increased demand on IT services with more users (some brand new computer users also).
- More TMUA Board awareness of performance data can generate questions that we may not be prepared to answer without time to analyze data.
- Project communication is an ongoing challenge.

Our Lucity Support Model

- Tulsa has a traditional IT support approach with some unique concepts:
 - A support team with both W&S and IT staff as Super Users
 - Business-side subject matter experts (SME's)
 - Business-side software application owners
 - 550 miles of City-owned fiber connects over 200 locations
 - Large data center that is heavily virtualized and fully redundant

Lucity will scale with our growth

- We plan to expand Lucity by using their partners.
- Scope is just water and sewer today, but
 - The mayor is watching
 - Interest from other groups
 - Streets
 - Traffic
 - Storm and Vegetation Management
 - Building Operations
 - Parks
 - Real Property Management

Other New Systems or Upgrades

- SCADA Master Plan – consolidate on Wonderware with historians
- StarLIMS replacement for lab data
- Automated Vehicle Location (AVL) solution
- Financial System replacement
- Utility Billing System replacement
- Permits and Licensing System replacement
- Performance Management System
- Document Management System replacement
- 311 Customer Care System along with IVR
